

Kevin Klöcker

Industrial Designer mit 10+ Jahren Agenturerfahrung,
spezialisiert auf ganzheitliche Produktgestaltung an der
Schnittstelle von Hardware und Software.

INDUSTRIAL DESIGN

Portfolio

Ich gestalte physische Produkte – von Consumer- bis zu Industriepro-
dukten. Ich arbeite nutzerzentriert, denke systematisch und schaffe Pro-
dukterlebnisse, die emotional überzeugen, funktional exzellent sind und
sich erfolgreich am Markt positionieren. Meine Expertise in UX/UI Design
ermöglicht mir außerdem, Produkte zu entwickeln, bei denen physische
Gestaltung und digitale Interaktion nahtlos ineinandergreifen.

From insight to interface: a UX built on real behavior

Redesign the user interface of the FILKA coffee machine to improve everyday usability while preserving the brand’s premium appeal.

Duration:	5 Month
Client:	SEVERIN Elektrogeräte GmbH
Role:	Product Owner, Lead UX & UI Designer
Responsibilities:	Full scope UX & UI Process

- Product Relaunch
- Physical & Digital UI

GOALS

Provide an easy overview of all the key features of the FILKA • Improve user guidance and the overall usability • Preserve the brand’s premium appeal with a convincing product re-launch.

CHALLENGE

Transform a complex and technically capable product into an intuitive experience – based on real user feedback, without changing the existing hardware. The product was technically strong, but users found the interface difficult and unintuitive – especially during setup and everyday use.

OPPORTUNITY MAPPING

We consolidated overlapping opportunities across all four user groups, clustered them by touchpoints with FILKA, and prioritized using the MoSCoW method.

PRIORITY UX IMPROVEMENTS:

- Simplified button functionality (no dual purposes)
- Self-explanatory icons and interface elements
- Smart feature visibility (hide non-essential functions)
- Clear error messaging and status indicators
- Intuitive warming process feedback
- Proactive maintenance reminders

Kevin Klöcker

Ideation

USER FLOW

Creating user flows helped us analyze and visualize individual functions like keep-warm, brew strength adjustment, and cleaning modes. Based on identified opportunities, we optimized the user flow and developed initial wireframes for button layouts and screen content.

Offene

Wertewelt der Harmoniser

- Genuss, Offenheit & Fantasie
- Wohlfühlen, Lockerheit & Leichtigkeit
- Kultur, Trends & Aufgeschlossenheit
- Erlebnis, Lebensfreude & Optimismus
- Empathie, Toleranz & Nachhaltigkeit
- Gesundheit, Wellness
- Spontan, Kontaktfreudig & offen für Inspiration
- Wertigkeit & Modernität
- Kreativität

Kauf- und Konsumverhalten

- Anspruchsvoll, Genuss- und Erlebnisorientiert
- Gesundheit, Wellness, Einrichtung
- Qualität, natürliche Rohstoffe & Nachhaltigkeit
- Trends und Mode
- Konsumfreudige Spontankäufer
- Achten aufs Geld, aber nicht vorrangig - Design, Qualität und Marke sind wichtiger
- Gönnen sich gern mal was
- Bummeln & Onlineshopping gleichermaßen
- Offen für Inspiration und Neues - probieren gerne aus
- Testberichte & Produktinformationen relevant

Relevante Fragen im Entscheidungsprozess:

- Gehe ich damit mit dem Trend?
- Kann ich es genießen / bringt es mir Genuss und Freude?
- Fühle ich mich damit wohl?
- Ist es stressfrei?

Das Leben genießen und die Dinge locker nehmen

Ich mag große Malls mit vielfältigem Angebot ebenso wie kleine exklusive Boutiquen.

Geld ist dazu da, sich ein schönes Leben zu machen

Ideation

INTERFACE DESIGN

User flow insights enabled us to consolidate improvements into two distinct concepts, differing primarily at the top level—button arrangement and content. To prepare for user testing, we refined the UI and adapted it to technical constraints (screen size and resolution).

- Designed and tested various icon concepts for intuitive, text-free navigation
- Created cohesive color palette for error states and content display, aligned with SEVERIN brand guidelines
- Explored multiple menu structures integrated with adjacent button layouts
- Focused on self-explanatory iconography (e.g., coffee beans vs. ground coffee indicators)

Ideation

- Explored multiple menu structures integrated with adjacent button layouts
- Focused on self-explanatory iconography (e.g., coffee beans vs. ground coffee indicators)

Testing

USER TESTING: CONCEPT A VS. B

Using an interactive prototype, we conducted task-based user testing with detailed feedback collection after each interaction. The testing focused on comparing two button layouts: a minimalist approach with nested functions versus a comprehensive top-level feature display.

KEY USER TESTING RESULTS (N=104):

- 97% overall satisfaction rate
- Interface perceived as simple and intuitive
- Icons were clear and understandable
- Users prefer core functions visible at top level
- Brew strength should be easily accessible, not buried in settings
- Room for improvement in menu navigation logic and wording

Design Matrix

Anforderungen

- Rückseite möglichst universell
 - Trennung möglichst planar (einfacher im Werkzeugbau)
- Vorderseite Variabel
 - KOSTAL Design Variante
 - OEM Produkt
- LED Position Fix
 - Folie Bedruckt (Siebdruck ähnlich BÜLA)
 - LED Kanal im Spritzgusswerkzeug?
- RFID Reader auf der Vorderseite (Optional?)
- Kabel um den Grundkörper wickeln

Nutzer

- Möglichst klein und schmal (Enge Garagen)
- Einfache Handhabung (Ladekabel)
- Einfache Anzeige
 - Betriebsbereit
 - Warten
 - Laden
 - Service/Störfall

Installateur

- Kabel anschließen (Oben/Unten/Rückseite)
- Variable Kabelverschraubung
- 2-Fache Verschraubung
- Genug Platz um die Kabel zu verschrauben

Handel

- Attraktives Design (kein Einheitsbrei)
- USP
