

# Kevin Klöcker

Senior UX/UI Designer with 10+ years of agency experience, specializing in interface design for physical and digital products.

UX & UI

Portfolio

I design intuitive user interfaces – from embedded touchscreen systems and HMIs to mobile apps and web applications. My background in industrial design enables me to have a holistic understanding of product experiences at the intersection of hardware and software. I work user-centered, data-driven, and translate complex requirements into clear, functional designs that delight users and achieve business goals.

Kevin Klöcker

# From insights to interface: a UX built on real behavior

Redesign the user interface of the FILKA coffee machine to improve everyday usability while preserving the brand's premium appeal.

Duration: 5 Month  
Client: SEVERIN Elektrogeräte GmbH  
Role: Product Owner, Lead UX & UI Designer  
Responsibilities: Full scope UX & UI Process

Product Relaunch

Physical & Digital UI

User Flow Optimization

## GOALS

Provide an easy overview of all the key features of the FILKA •  
Improve user guidance and the overall usability • Preserve  
the brand's premium appeal with a convincing product re-launch.

#### CHALLENGE

Transform a complex and technically capable product into an intuitive experience – based on real user feedback, without changing the existing hardware. The product was technically strong, but users found the interface difficult and unintuitive – especially during setup and everyday use.

## Research &amp; Analysis

## FIRST IMPRESSIONS & KICK-OFF

During FILKA setup and testing, we identified initial UX pain points and uncovered first optimization opportunities. To establish interface benchmarks in the coffee machine market, we conducted comprehensive competitive analysis.

## KEY DECISIONS:

- Selected new TFT display with development team for enhanced design flexibility
- Maintained existing capacitive button layout due to PCB size constraints
- Worked within hardware limitations while maximizing UX improvements

### The host

#### Needs & Wishes

- Good quality coffee
- freshly ground coffee beans
- flexible, small cup for my dog for guests
- coffee at the touch of a button

#### Frustrations

- well designed & easy to use
- easy and intuitive use
- easy to clean
- easy to use for all my guests

#### Preferred size

Coffee lover

Coffee consumption

Convenience

Technology minded

### The teacher

#### Needs & Wishes

- Always fresh coffee on hand
- self-regulating device
- Good quality coffee
- individual adjustments per user
- Coffee heating ready for a quick thing

#### Frustrations

- Charging sticks
- Cold coffee
- No coffee beans
- Old coffee powder forgotten in the filter
- Imprecise and limiting interface

#### Preferred size

Coffee lover

Coffee consumption

### The coffee lover

"Coffee has more than twice as many aromatic substances as wine"

#### Description

I buy my coffee beans from a small roastery, and it's worth the extra cost. The smell of coffee is soothing and invigorating at the same time. Making coffee is a ritual, waiting for coffee is like meditation. I love trying new coffee and getting the best out of it.

#### Needs & Wishes

- Excellent quality coffee
- full control
- individual settings
- highly ground coffee beans

#### Frustrations

- When the coffee is too strong
- waiting, complexity in coffee
- cold coffee
- no manual override
- oxidized design

#### Preferred size

Coffee lover

Coffee consumption

Convenience

Technology minded

### The early bird

"Thank God it's monday"

#### Description

With the ring of the alarm begins a new day, new challenges, some sports in the morning and finally back to work - it's a beautiful start into the new week. A very distinctive morning routine ensures that the coffee is finished while getting ready in the bathroom - just in time to screw a lid on the cup and head off to work.

#### Needs & Wishes

- individual adjustments per user
- individual adjustments per user
- individual adjustments per user
- individual adjustments per user

#### Frustrations

- failures
- when getting ready in the morning
- individual adjustments per user
- individual adjustments per user

### Research & Analysis

### USER JOURNEYS

FILKA's diverse target audience required detailed user segmentation to map specific needs and requirements. We created distinct user journeys for each segment, uncovering hidden opportunities and identifying gaps between user expectations and the current UX.

## OPPORTUNITY MAPPING

We consolidated overlapping opportunities across all four user groups, clustered them by touchpoints with FILKA, and prioritized using the MoSCoW method.

## PRIORITY UX IMPROVEMENTS:

- Simplified button functionality (no dual purposes)
- Self-explanatory icons and interface elements
- Smart feature visibility (hide non-essential functions)
- Clear error messaging and status indicators
- Intuitive warming process feedback
- Proactive maintenance reminders

Ideation

USER FLOW

Creating user flows helped us analyze and visualize individual functions like keep-warm, brew strength adjustment, and cleaning modes. Based on identified opportunities, we optimized the user flow and developed initial wireframes for button layouts and screen content.

Ideation

INTERFACE DESIGN

User flow insights enabled us to consolidate improvements into two distinct concepts, differing primarily at the top level—button arrangement and content. To prepare for user testing, we refined the UI and adapted it to technical constraints (screen size and resolution).

- Designed and tested various icon concepts for intuitive, text-free navigation
- Created cohesive color palette for error states and content display, aligned with SEVERIN brand guidelines
- Explored multiple menu structures integrated with adjacent button layouts
- Focused on self-explanatory iconography (e.g., coffee beans vs. ground coffee indicators)

**H1, Roboto 65, Medium**  
**H2, Roboto 40, Medium**  
**H3, Roboto 28, Bold**

Body-Highlight, Roboto 24, Medium  
Body, Roboto 24, Regular  
Body not selected, Roboto 24, Regular

Testing

USER TESTING: CONCEPT A VS. B

Using an interactive prototype, we conducted task-based user testing with detailed feedback collection after each interaction. The testing focused on comparing two button layouts: a minimalist approach with nested functions versus a comprehensive top-level feature display.

KEY USER TESTING RESULTS (N=104):

- 97% overall satisfaction rate
- Interface perceived as simple and intuitive
- Icons were clear and understandable
- Users prefer core functions visible at top level
- Brew strength should be easily accessible, not buried in settings
- Room for improvement in menu navigation logic and wording

HI-FI PROTOTYPE DEVELOPMENT

Following multiple iterations and functional adjustments based on testing results, we created a comprehensive hi-fi wireframe for developer handoff, including all functions, settings, and user touchpoints.

WHAT WE FOCUSED ON:

A streamlined onboarding flow guiding users through essential setup configurations with error-proof interactions.

A clean layout featuring essential functions at top level, with non-essential features hidden to reduce interface complexity.

Contextual reminders placed strategically to prevent malfunctions and user frustration.

Brew strength and cup quantity controls designed for intuitive adjustment. Context-aware buttons displaying only active, relevant options.

Customizable keep-warm duration for glass carafe with countdown timer providing clear feedback on remaining time.

Manual integrated into settings via QR code to eliminate need for physical instruction searching.

## DESIGN IMPACT & SOLUTIONS

Through user-centered design validated by 104-person testing, we transformed FILKA's interface by implementing contextual feedback systems and restructuring the information architecture. Key improvements included elevating frequently used features to top-level access, creating context-aware displays that show only relevant functions, and designing a streamlined onboarding flow.

## KEY DESIGN PRINCIPLES:

- Progressive disclosure to minimize interface complexity
- Error prevention through strategic UI patterns
- Cohesive visual system with self-explanatory iconography
- Enhanced accessibility via clear visual hierarchy and feedback systems

Kevin Klöcker

# Interface meets Interior.

Develop a smart interface that blends seamlessly into high-end architecture, focusing on clarity, elegance, and intuitive control.

Duration: 2 Years  
Client: ALBRECHT JUNG GmbH & Co. KG  
Role: Product Owner, Lead UX & UI Designer  
Responsibilities: Full scope UX & UI Process

Embedded UI

Smart Home

Minimal Design

## GOALS

Design a monochrome interface system that adapts seamlessly to JUNG's Les Couleurs color range • Prioritize intuitive, fast interaction patterns with exceptional visual clarity for complex KNX controls • Maintain consistency with JUNG's premium design language and quality standards

#### CHALLENGE

Design a sophisticated KNX smart home interface for luxury architectural integration while maintaining JUNG's premium standards. Balance aesthetic minimalism with functional clarity — enabling fast, intuitive control of complex building automation through a flexible monochrome system that can be matched with the JUNG LS990 Les Couleurs switch system.

PROJECT DEFINITION

With no clear initial brief, we partnered with JUNG from project inception to co-define the challenge. Together, we established the vision for a distinctive smart home controller that bridges design, functionality, and aesthetics—specifically tailored for the premium market. From the outset, Le Corbusier’s Les Couleurs range was identified as a critical design foundation.

**Stakeholder & User**  
02

**Fokusgruppen:**

Haus- oder Wohnungseigentümer im gehobenen Wohnungsbau, sowie Architekten

**Needs:**

- gute Beratung (Fachwissen in Technik und Gestaltung)
- Unterstützung in der Auswahl von Produkten, die ihren Bedürfnissen entsprechen
- Beratung und Transparenz bzgl. Preis/Leistung
- möchte kein hochtechnisiertes Haus, sondern eine moderne aber gut zu bedienende Erleichterung
- einfache Bedienstruktur mit intuitiver Menüführung

Hybrides Produkt als Einheit aus Interface und Design-Rahmenelement

INITIAL CONCEPT DEVELOPMENT

After mapping all required functions from the specification catalog – lighting control, heating, multimedia, and others – and establishing the technological foundation as a touch display, we developed initial interaction concepts and lo-fi wireframes for a first look & feel.

## Split Control

### Status Quo

### Zusatzfeatures

### Alles auf einer Seite

### Zusätzliche Detailseite

## CONCEPT REFINEMENT

We aimed to create a monochrome design that integrates seamlessly into architectural environments—visually restrained yet functionally focused. Unlike typical smart home interfaces that appear overly technical, our solution emerged through iterative refinement and close developer collaboration.

## KEY DESIGN HIGHLIGHTS:

- Monochrome aesthetic for seamless architectural integration
- Functionally focused interface prioritizing essential controls
- Intuitive usability requiring no learning curve
- Minimal UI avoiding technical complexity
- Collaborative development ensuring feasibility

ALBRECHT JUNG

## TOUCH INTERACTION

We simplified the interface by adopting familiar smartphone touch patterns. Instead of reinventing interaction, we built on user expectations — ensuring fast orientation and intuitive use.

#### HOW IT WORKS

The background adapts to the selected frame color. The UI comes in both light and dark modes to ensure maximum contrast based on the background. This logic mirrors the LS990 Les Couleurs switch system.

## DESIGN IMPACT & SOLUTIONS

The wide color range pairs seamlessly with the minimalist, monochrome UI. Its adaptability makes the product ideal for premium interior and architectural environments.

### KEY DESIGN HIGHLIGHTS:

- Fast and intuitive control, even for complex settings like switching schedules
- Monochrome UI that seamlessly adapts to various background colors
- High design standards with refined icons, clean lines, and balanced typography
- Customizable favorites pages for quick access to commonly used functions (up to three pages)
- Swipe gestures for quick and intuitive menu navigation
- Positioned in the premium segment with clear USPs that strengthen JUNG's brand identity

# Making Industry Expertise Clickable

Redesign of the KAJO website and UI to improve navigation, highlight industry relevance, and create a more customer-centric experience through new features.

Duration: 2 Month  
Client: KAJO GmbH  
Role: Lead UX & UI Designer  
Responsibilities: UX Improvements, Full website redesign

Web Redesign

Information Architecture

UI Components & Design System

## GOALS

Create a clear, user-friendly platform that reflects KAJO's product and industry expertise • Improve navigation and access to relevant content for different user groups • Enable deeper service integration through a personalized area • Establish a scalable and brand-consistent UI across all touchpoints

# CHALLENGE

Website relaunch with a new, modern and structured layout that builds on KAJO's brand identity. The navigation and site architecture were redesigned for greater clarity and stronger internal linking. A dedicated professional area was added to provide customers with direct contact options and extended product information.

## DESIGN APPROACH

In a kick-off workshop with the client, we defined the new navigation structure and captured all key requirements for the website relaunch. An initial low-fidelity wireframe helped visualize the layout. From the start, both mobile and desktop versions were considered to ensure an optimal user experience across devices.

DESIGN CONCEPTS

Two distinct UI design approaches were created for validation and reviewed with the client to identify strengths and weaknesses.

- Light UI version inspired by the previous website design: soft relaunch with modernized elements
- Dark UI version as a bold, fresh alternative: highlights product quality and premium positioning through visual language

#### KEY DESIGN HIGHLIGHTS:

- Bold premium redesign emphasizing product excellence and brand positioning
- Streamlined navigation with cross-industry linking for efficient user journeys
- Prominent industries anchored on the homepage for immediate brand impact
- Comprehensive product navigation providing users complete information access
- Enhanced user experience through optimized information architecture

# Bringing coherence to complexity – by design.

Redesigning the KOSTAL Solar App to make complex energy flows easy to understand and actionable – for professionals and private users alike.

Duration: 6 Month  
Client: KOSTAL Solar Electric GmbH  
Role: Product Owner, Lead UX & UI Designer  
Responsibilities: Full scope UX & UI Process

App Redesign

Information Architecture

UI Components & Design System

## GOALS

Make complex solar energy flows visually intuitive and easy to navigate • Align the app with KOSTAL's digital brand identity • Translate technical content into emotionally accessible interactions

## CHALLENGE

Create a consistent product experience across all categories—from inverters to wallboxes to apps—while maintaining KOSTAL's core design DNA. Develop intuitive visual energy flow representation and showcase virtual battery storage solutions to attract new customer segments.

Kevin Klöcker

## CONCEPT DEVELOPMENT

Based on the existing app and target audience segmentation across various user groups, we created initial designs and wireframes for rapid testing to ensure optimal user flow.

KOSTAL

Clear energy flow visualization enabling users to instantly understand yield and grid feed-in at a glance.

Historical data visualization in brand-consistent design, including filter functionality for analyzing different time periods.

Virtual battery feature provides preview of potential benefits to simplify purchase decisions.
