

Kevin Klöcker

Senior UX/UI Designer with 10+ years of agency experience, specializing in interface design for physical and digital products.

UX & UI

Portfolio

I design intuitive user interfaces – from embedded touchscreen systems and HMIs to mobile apps and web applications. My background in industrial design enables me to have a holistic understanding of product experiences at the intersection of hardware and software. I work user-centered, data-driven, and translate complex requirements into clear, functional designs that delight users and achieve business goals.

Kevin Klöcker

From insights to interface: a UX built on real behavior

Redesign the user interface of the FILKA coffee machine to improve everyday usability while preserving the brand's premium appeal.

Duration: 5 Month
Client: SEVERIN Elektrogeräte GmbH
Role: Product Owner, Lead UX & UI Designer
Responsibilities: Full scope UX & UI Process

Product Relaunch

Physical & Digital UI

User Flow Optimization

GOALS

Provide an easy overview of all the key features of the FILKA •
Improve user guidance and the overall usability • Preserve
the brand's premium appeal with a convincing product re-launch.

CHALLENGE

Transform a complex and technically capable product into an intuitive experience – based on real user feedback, without changing the existing hardware. The product was technically strong, but users found the interface difficult and unintuitive – especially during setup and everyday use.

Display

Segment-Display

Buttons

Five buttons: Back, Forward, Stop, Start, and a central button.

Tastennutzung

Bedienungsschritte

Uhrzeit & Timer

Anmerkungen

Timer und Uhrzeit auf einer Taste platzsparendes Layout

Ändern der Stunden/Minuten auf nach oben möglich

Speichern der Uhrzeit/Timer

Tap auf Timer gibt gleich in die Timer Einstellung

Wasserfilter

Anmerkungen

Warum muss der Filter aus in den Einstellungen deaktiviert werden?

Warum muss das Wasserfilter-Symbol im Display angezeigt werden?

Schon im Display nicht eindeutig?

Gibt es einen Auswahlschalter zum Deaktivieren des Filters nach 2 Minuten?

Schon 22 in der Anzeige auszuwählen nach noch unter Punkt 4.3.3.3.3

Falls nicht, gehen die Wasserstärke?

Brühvorgang

Anmerkungen

Warum muss das Wasserfilter-Symbol im Display angezeigt werden?

Warum muss das Wasserfilter-Symbol im Display angezeigt werden?

Warum muss das Wasserfilter-Symbol im Display angezeigt werden?

Warum muss das Wasserfilter-Symbol im Display angezeigt werden?

Betrachtung bestehender Severin Produkte

Fokus UX/UI

Fazit

Kunden wünschen sich ein Produkt, das einfach zu bedienen ist und eine intuitive Bedienung hat. Das Produkt sollte auch eine intuitive Bedienung haben und eine intuitive Bedienung haben.

Research & Analysis

FIRST IMPRESSIONS & KICK-OFF

During FILKA setup and testing, we identified initial UX pain points and uncovered first optimization opportunities. To establish interface benchmarks in the coffee machine market, we conducted comprehensive competitive analysis.

KEY DECISIONS:

- Selected new TFT display with development team for enhanced design flexibility
- Maintained existing capacitive button layout due to PCB size constraints
- Worked within hardware limitations while maximizing UX improvements

Research & Analysis

USER JOURNEYS

FILKA's diverse target audience required detailed user segmentation to map specific needs and requirements. We created distinct user journeys for each segment, uncovering hidden opportunities and identifying gaps between user expectations and the current UX.

OPPORTUNITY MAPPING

We consolidated overlapping opportunities across all four user groups, clustered them by touchpoints with FILKA, and prioritized using the MoSCoW method.

PRIORITY UX IMPROVEMENTS:

- Simplified button functionality (no dual purposes)
- Self-explanatory icons and interface elements
- Smart feature visibility (hide non-essential functions)
- Clear error messaging and status indicators
- Intuitive warming process feedback
- Proactive maintenance reminders

The Host Conclusion

The existing features and functions are alright, but the user lacks certain guidance and indicators about what they are doing and whether they are doing everything right e.g. Setup, cleaning, etc..

Most important & desired features

easy and convenient selection of my preferred size of coffee

keeping coffee warm: individual time setting of the warming plate

indicator on water tank/level jug on the heating plate

indicator about the status of the coffee warming process

Biggest Pain Points

not enough guidance during the setting up, cleaning, warming plate...

UI not intuitive: needs manual for basic settings, cleaning, warming plate, etc.

No information about how much coffee is needed to get the most out of the coffee

Flashing light (LED ring) during the coffee warming process

Coffee filter change

I love my FILKA because...
"...I have the option to make both a cup and a whole pot of delicious coffee with the push of a button – and I can't do anything wrong."

Desired Statement

The Coffee Lover Conclusion

The user is happy about the many settings (grind, coffee strength), but would like to have more individual features such as water amount per cup. Everything that could affect the coffee flavor is important but needs to be more intuitive to use.

Most important & desired features

choosing the grinding grade and coffee strength

individual coffee amount setting (in ml)

Using an always fresh water filter

easy and fast through-cleaning process

Biggest Pain Points

not enough individual settings: no way to get the most out of the coffee

UI not intuitive: needs manual for basic settings, cleaning, warming plate, etc.

No information about how much coffee is needed to get the most out of the coffee

Flashing light (LED ring) during the coffee warming process

Coffee filter change

I love my FILKA because...
"...It allows me to try out different coffee beans and new variations to find my absolute favorite setting – with an easy cleaning. It makes sure flavors are not affected."

Desired Statement

The teacher Conclusion

The existing features are alright, but due to counterintuitive design it is not convenient for everyone to find the right size and/or settings. Also the lack of an easy cleaning is a big pain point.

Most important & desired features

Quick and convenient selection of my preferred size of coffee

Easy change of coffee settings (plate)

keeping coffee warm for a long period of time

indicator about the status of the coffee warming process

Biggest Pain Points

UI not intuitive: needs manual especially for cleaning

No information about how much coffee is needed to get the most out of the coffee

Flashing light (LED ring) during the coffee warming process

Coffee filter change

The early bird Conclusion

The flexibility of using any kind of vessel is very appreciated. The timer function works well until you forget to turn it on and forget to change the coffee filter.

Most important & desired features

easy and convenient selection of my preferred size of coffee

indicator about the status of the coffee warming process

easy and fast through-cleaning process

Biggest Pain Points

UI not intuitive: needs manual especially for cleaning

No information about how much coffee is needed to get the most out of the coffee

Flashing light (LED ring) during the coffee warming process

Coffee filter change

Potential Cluster Focus UX/UI

General UX improvements

Prevent double occupancy

manual im UI

guidance im UI

intuitive icons

Buttons that are needed should be visible

using buttons to set and indicators of setting separately

Coffee making process

only showing visible buttons during coffee making process

possibility to set up ml of coffee

Information that needs coffee size the different reason

indicator when water is not enough for chosen coffee size

Maintenance

indicator when to change the water filter

indicator when to change/clean coffee filter

indicator when beans are missing for my chosen result

understandable description of an error in UI

First Use

guidance for quick set-up

welcome note from machine

Display

no HMI that is readable at night

adding list of error codes in manual

online manual via QR Code

Manual

Page for Error codes in manual

adding list of error codes in manual

online manual via QR Code

Light indicator

why blue light (blue in manual code) - intuitive color strategy

no flashing light during coffee warming process

using an understandable color strategy (e.g. not using red for warm water and warning)

Sound

Different indicator for sound on and off

Sound of display independent of the sound indicator of the coffee process

MoSCoW

Priorisation of Potentials

Must Have

understandable description of an error in UI (descaling, water missing etc.)

easy and clear communication that machine has to be descaled

understandable indicator of warming process (glass jug)

Fast and convenient selection of my size

understandable indicator when water is missing (instead von H1 error code)

understandable meaning of light signal during coffee making process (LED ring)

functions that are needed should be visible features that are not necessary needed on daily basis shouldn't be visible all the time

no double occupancy of buttons and interface elements

intuitive and understandable icons and/or descriptions of buttons and other interface elements

Should Have

indicator/ reminder to clean the coffee filter

guidance from UI for rinsing machine

guidance from UI for descaling machine

easy and intuitive setting of warming duration

indicator when coffee is ready

using an understandable colour strategy (e.g. not using red for warm water and warning)

indicator for duration of coffee process

Could Have

guidance for quick set-up

welcome note from machine

indicator/ reminder when to change the water filter

indicator how long the rinsing will take

possibility to set-up ml of coffee

information how much litres coffee are the different vessels

Won't Have

rinsing automatically after use/ before standby

possibility to keep coffee warm independently from coffee making process

individual time setting (Warming plate)

indicator when water is not enough for chosen coffee size

Ideation

USER FLOW

Creating user flows helped us analyze and visualize individual functions like keep-warm, brew strength adjustment, and cleaning modes. Based on identified opportunities, we optimized the user flow and developed initial wireframes for button layouts and screen content.

Ideation

INTERFACE DESIGN

User flow insights enabled us to consolidate improvements into two distinct concepts, differing primarily at the top level—button arrangement and content. To prepare for user testing, we refined the UI and adapted it to technical constraints (screen size and resolution).

- Designed and tested various icon concepts for intuitive, text-free navigation
- Created cohesive color palette for error states and content display, aligned with SEVERIN brand guidelines
- Explored multiple menu structures integrated with adjacent button layouts
- Focused on self-explanatory iconography (e.g., coffee beans vs. ground coffee indicators)

H1, Roboto 65, Medium
H2, Roboto 40, Medium
H3, Roboto 28, Bold

Body-Highlight, Roboto 24, Medium
Body, Roboto 24, Regular
Body not selected, Roboto 24, Regular

Testing

USER TESTING: CONCEPT A VS. B

Using an interactive prototype, we conducted task-based user testing with detailed feedback collection after each interaction. The testing focused on comparing two button layouts: a minimalist approach with nested functions versus a comprehensive top-level feature display.

KEY USER TESTING RESULTS (N=104):

- 97% overall satisfaction rate
- Interface perceived as simple and intuitive
- Icons were clear and understandable
- Users prefer core functions visible at top level
- Brew strength should be easily accessible, not buried in settings
- Room for improvement in menu navigation logic and wording

HI-FI PROTOTYPE DEVELOPMENT

Following multiple iterations and functional adjustments based on testing results, we created a comprehensive hi-fi wireframe for developer handoff, including all functions, settings, and user touchpoints.

WHAT WE FOCUSED ON:

A streamlined onboarding flow guiding users through essential setup configurations with error-proof interactions.

A clean layout featuring essential functions at top level, with non-essential features hidden to reduce interface complexity.

Contextual reminders placed strategically to prevent malfunctions and user frustration.

Brew strength and cup quantity controls designed for intuitive adjustment. Context-aware buttons displaying only active, relevant options.

Customizable keep-warm duration for glass carafe with countdown timer providing clear feedback on remaining time.

Manual integrated into settings via QR code to eliminate need for physical instruction searching.

DESIGN IMPACT & SOLUTIONS

Through user-centered design validated by 104-person testing, we transformed FILKA's interface by implementing contextual feedback systems and restructuring the information architecture. Key improvements included elevating frequently used features to top-level access, creating context-aware displays that show only relevant functions, and designing a streamlined onboarding flow.

KEY DESIGN PRINCIPLES:

- Progressive disclosure to minimize interface complexity
- Error prevention through strategic UI patterns
- Cohesive visual system with self-explanatory iconography
- Enhanced accessibility via clear visual hierarchy and feedback systems

Interface meets Interior.

Develop a smart interface that blends seamlessly into high-end architecture, focusing on clarity, elegance, and intuitive control.

- Duration:

2 Years
- Client:

ALBRECHT JUNG GmbH & Co. KG
- Role:

Product Owner, Lead UX & UI Designer
- Responsibilities:

Full scope UX & UI Process

Embedded UI

Smart Home

Minimal Design

GOALS

Design a monochrome interface system that adapts seamlessly to JUNG’s Les Couleurs color range • Prioritize intuitive, fast interaction patterns with exceptional visual clarity for complex KNX controls • Maintain consistency with JUNG’s premium design language and quality standards

CHALLENGE

Design a sophisticated KNX smart home interface for luxury architectural integration while maintaining JUNG's premium standards. Balance aesthetic minimalism with functional clarity — enabling fast, intuitive control of complex building automation through a flexible monochrome system that can be matched with the JUNG LS990 Les Couleurs switch system.

PROJECT DEFINITION

With no clear initial brief, we partnered with JUNG from project inception to co-define the challenge. Together, we established the vision for a distinctive smart home controller that bridges design, functionality, and aesthetics—specifically tailored for the premium market. From the outset, Le Couleurs range was identified as a critical design foundation.

Stakeholder & User
02

Fokusgruppen:
Haus- oder Wohnungseigentümer im gehobenen Wohnungsbau, sowie Architekten

- Needs:**
- gute Beratung (Fachwissen in Technik und Gestaltung)
 - Unterstützung in der Auswahl von Produkten, die ihren Bedürfnissen entsprechen
 - Beratung und Transparenz bzgl. Preis/Leistung
 - möchte kein hochtechnisiertes Haus, sondern eine moderne aber gut zu bedienende Erleichterung
 - einfache Bedienstruktur mit intuitiver Menüführung

Designaffine Hauseigentümerin

Innovation Gap

Hybrides Produkt als Einheit aus Interface und Design-Rahmenelement

INITIAL CONCEPT DEVELOPMENT

After mapping all required functions from the specification catalog – lighting control, heating, multimedia, and others – and establishing the technological foundation as a touch display, we developed initial interaction concepts and lo-fi wireframes for a first look & feel.

Kevin Klöcker

Split Control

Status Quo

Zusatzfeatures

Alles auf einer Seite

Zusätzliche Detailseite

CONCEPT REFINEMENT

We aimed to create a monochrome design that integrates seamlessly into architectural environments—visually restrained yet functionally focused. Unlike typical smart home interfaces that appear overly technical, our solution emerged through iterative refinement and close developer collaboration.

KEY DESIGN HIGHLIGHTS:

- Monochrome aesthetic for seamless architectural integration
- Functionally focused interface prioritizing essential controls
- Intuitive usability requiring no learning curve
- Minimal UI avoiding technical complexity
- Collaborative development ensuring feasibility

ALBRECHT JUNG

TOUCH INTERACTION

We simplified the interface by adopting familiar smartphone touch patterns. Instead of reinventing interaction, we built on user expectations — ensuring fast orientation and intuitive use.

HOW IT WORKS

The background adapts to the selected frame color. The UI comes in both light and dark modes to ensure maximum contrast based on the background. This logic mirrors the LS990 Les Couleurs switch system.

DESIGN IMPACT & SOLUTIONS

The wide color range pairs seamlessly with the minimalist, monochrome UI. Its adaptability makes the product ideal for premium interior and architectural environments.

KEY DESIGN HIGHLIGHTS:

- Fast and intuitive control, even for complex settings like switching schedules
- Monochrome UI that seamlessly adapts to various background colors
- High design standards with refined icons, clean lines, and balanced typography
- Customizable favorites pages for quick access to commonly used functions (up to three pages)
- Swipe gestures for quick and intuitive menu navigation
- Positioned in the premium segment with clear USPs that strengthen JUNG's brand identity

Kevin Klöcker

Making Industry Expertise Clickable

Redesign of the KAJO website and UI to improve navigation, highlight industry relevance, and create a more customer-centric experience through new features.

Duration: 2 Month
Client: KAJO GmbH
Role: Lead UX & UI Designer
Responsibilities: UX Improvements, Full website redesign

Web Redesign

Information Architecture

UI Components & Design System

GOALS

Create a clear, user-friendly platform that reflects KAJO's product and industry expertise • Improve navigation and access to relevant content for different user groups • Enable deeper service integration through a personalized area • Establish a scalable and brand-consistent UI across all touchpoints

CHALLENGE

Website relaunch with a new, modern and structured layout that builds on KAJO's brand identity. The navigation and site architecture were redesigned for greater clarity and stronger internal linking. A dedicated professional area was added to provide customers with direct contact options and extended product information.

DESIGN APPROACH

In a kick-off workshop with the client, we defined the new navigation structure and captured all key requirements for the website relaunch. An initial low-fidelity wireframe helped visualize the layout. From the start, both mobile and desktop versions were considered to ensure an optimal user experience across devices.

DESIGN CONCEPTS

Two distinct UI design approaches were created for validation and reviewed with the client to identify strengths and weaknesses.

- Light UI version inspired by the previous website design: soft relaunch with modernized elements
- Dark UI version as a bold, fresh alternative: highlights product quality and premium positioning through visual language

KEY DESIGN HIGHLIGHTS:

- Bold premium redesign emphasizing product excellence and brand positioning
- Streamlined navigation with cross-industry linking for efficient user journeys
- Prominent industries anchored on the homepage for immediate brand impact
- Comprehensive product navigation providing users complete information access
- Enhanced user experience through optimized information architecture

Bringing coherence to complexity – by design.

Redesigning the KOSTAL Solar App to make complex energy flows easy to understand and actionable – for professionals and private users alike.

Duration: 6 Month
Client: KOSTAL Solar Electric GmbH
Role: Product Owner, Lead UX & UI Designer
Responsibilities: Full scope UX & UI Process

App Redesign

Information Architecture

UI Components & Design System

GOALS

Make complex solar energy flows visually intuitive and easy to navigate • Align the app with KOSTAL's digital brand identity • Translate technical content into emotionally accessible interactions

CHALLENGE

Create a consistent product experience across all categories—from inverters to wallboxes to apps—while maintaining KOSTAL’s core design DNA. Develop intuitive visual energy flow representation and showcase virtual battery storage solutions to attract new customer segments.

Kevin Klöcker

CONCEPT DEVELOPMENT

Based on the existing app and target audience segmentation across various user groups, we created initial designs and wireframes for rapid testing to ensure optimal user flow.

KOSTAL

Clear energy flow visualization enabling users to instantly understand yield and grid feed-in at a glance.

Historical data visualization in brand-consistent design, including filter functionality for analyzing different time periods.

Virtual battery feature provides preview of potential benefits to simplify purchase decisions.
