

Kevin Klöcker

Industrial Designer with 10+ years of agency experience, specializing in holistic product design at the intersection of hardware and software.

INDUSTRIAL DESIGN

Portfolio

I design physical products, from consumer goods to industrial Products. My approach is user-centered and systems-driven, creating product experiences that resonate emotionally, perform with functional excellence, and achieve strong market positioning. My expertise in UX/UI design additionally enables me to develop products where physical form and digital interaction work in seamless concert.

Aesthetic design for defined audiences

Design of a spice mill tailored to the „Open & Harmonizer“ limbic target groups.

Duration: 3 Month
Client: Küchenprofi Group / Zassenhaus
Role: Product Owner, Lead Designer
Responsibilities: Full scope Design Process

GOALS

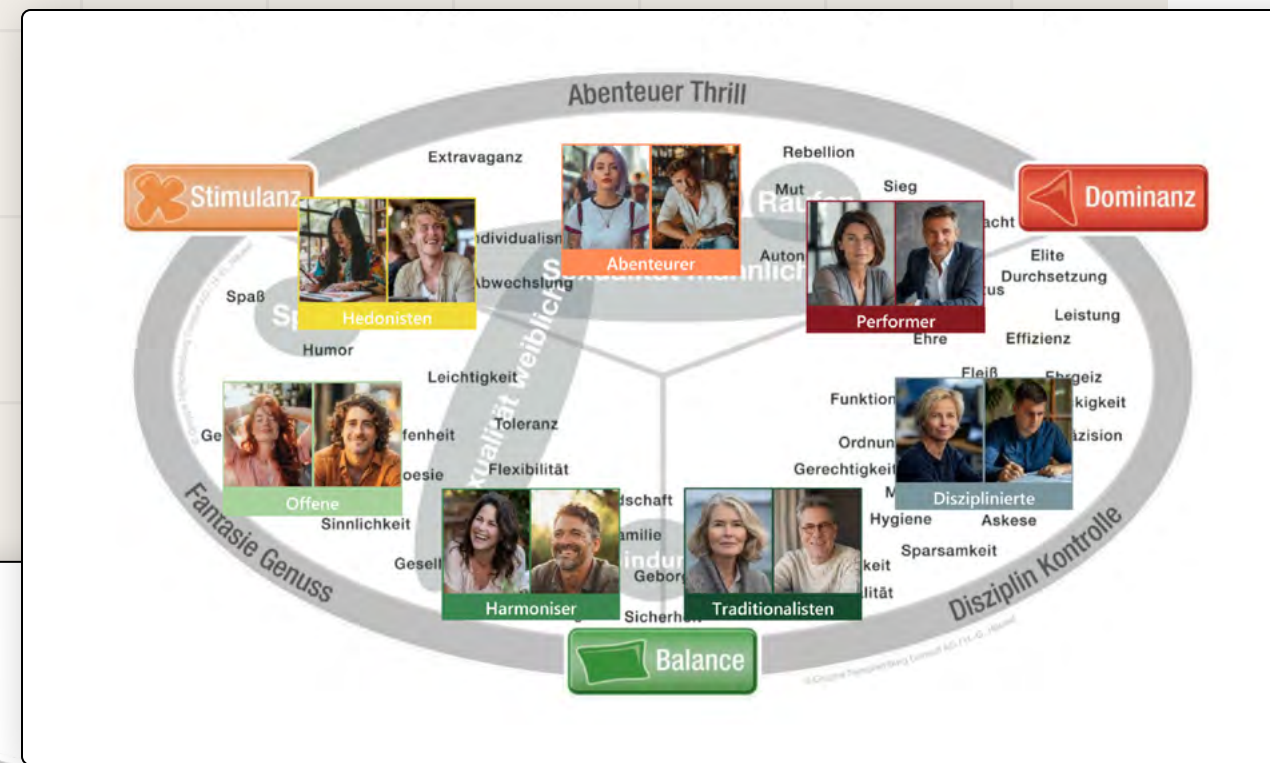

Design of a new iconic spice mill • Expansion of existing product families • Target group-specific approach utilizing Limbic mapping.

CHALLENGE

Creation of a new iconic spice mill specifically targeting the „Open & Harmonizer“ limbic types, designed to integrate into their modern, design-oriented living environments. The innovation lies in the combination of natural oak with KRION, a solid surface stone-like material.

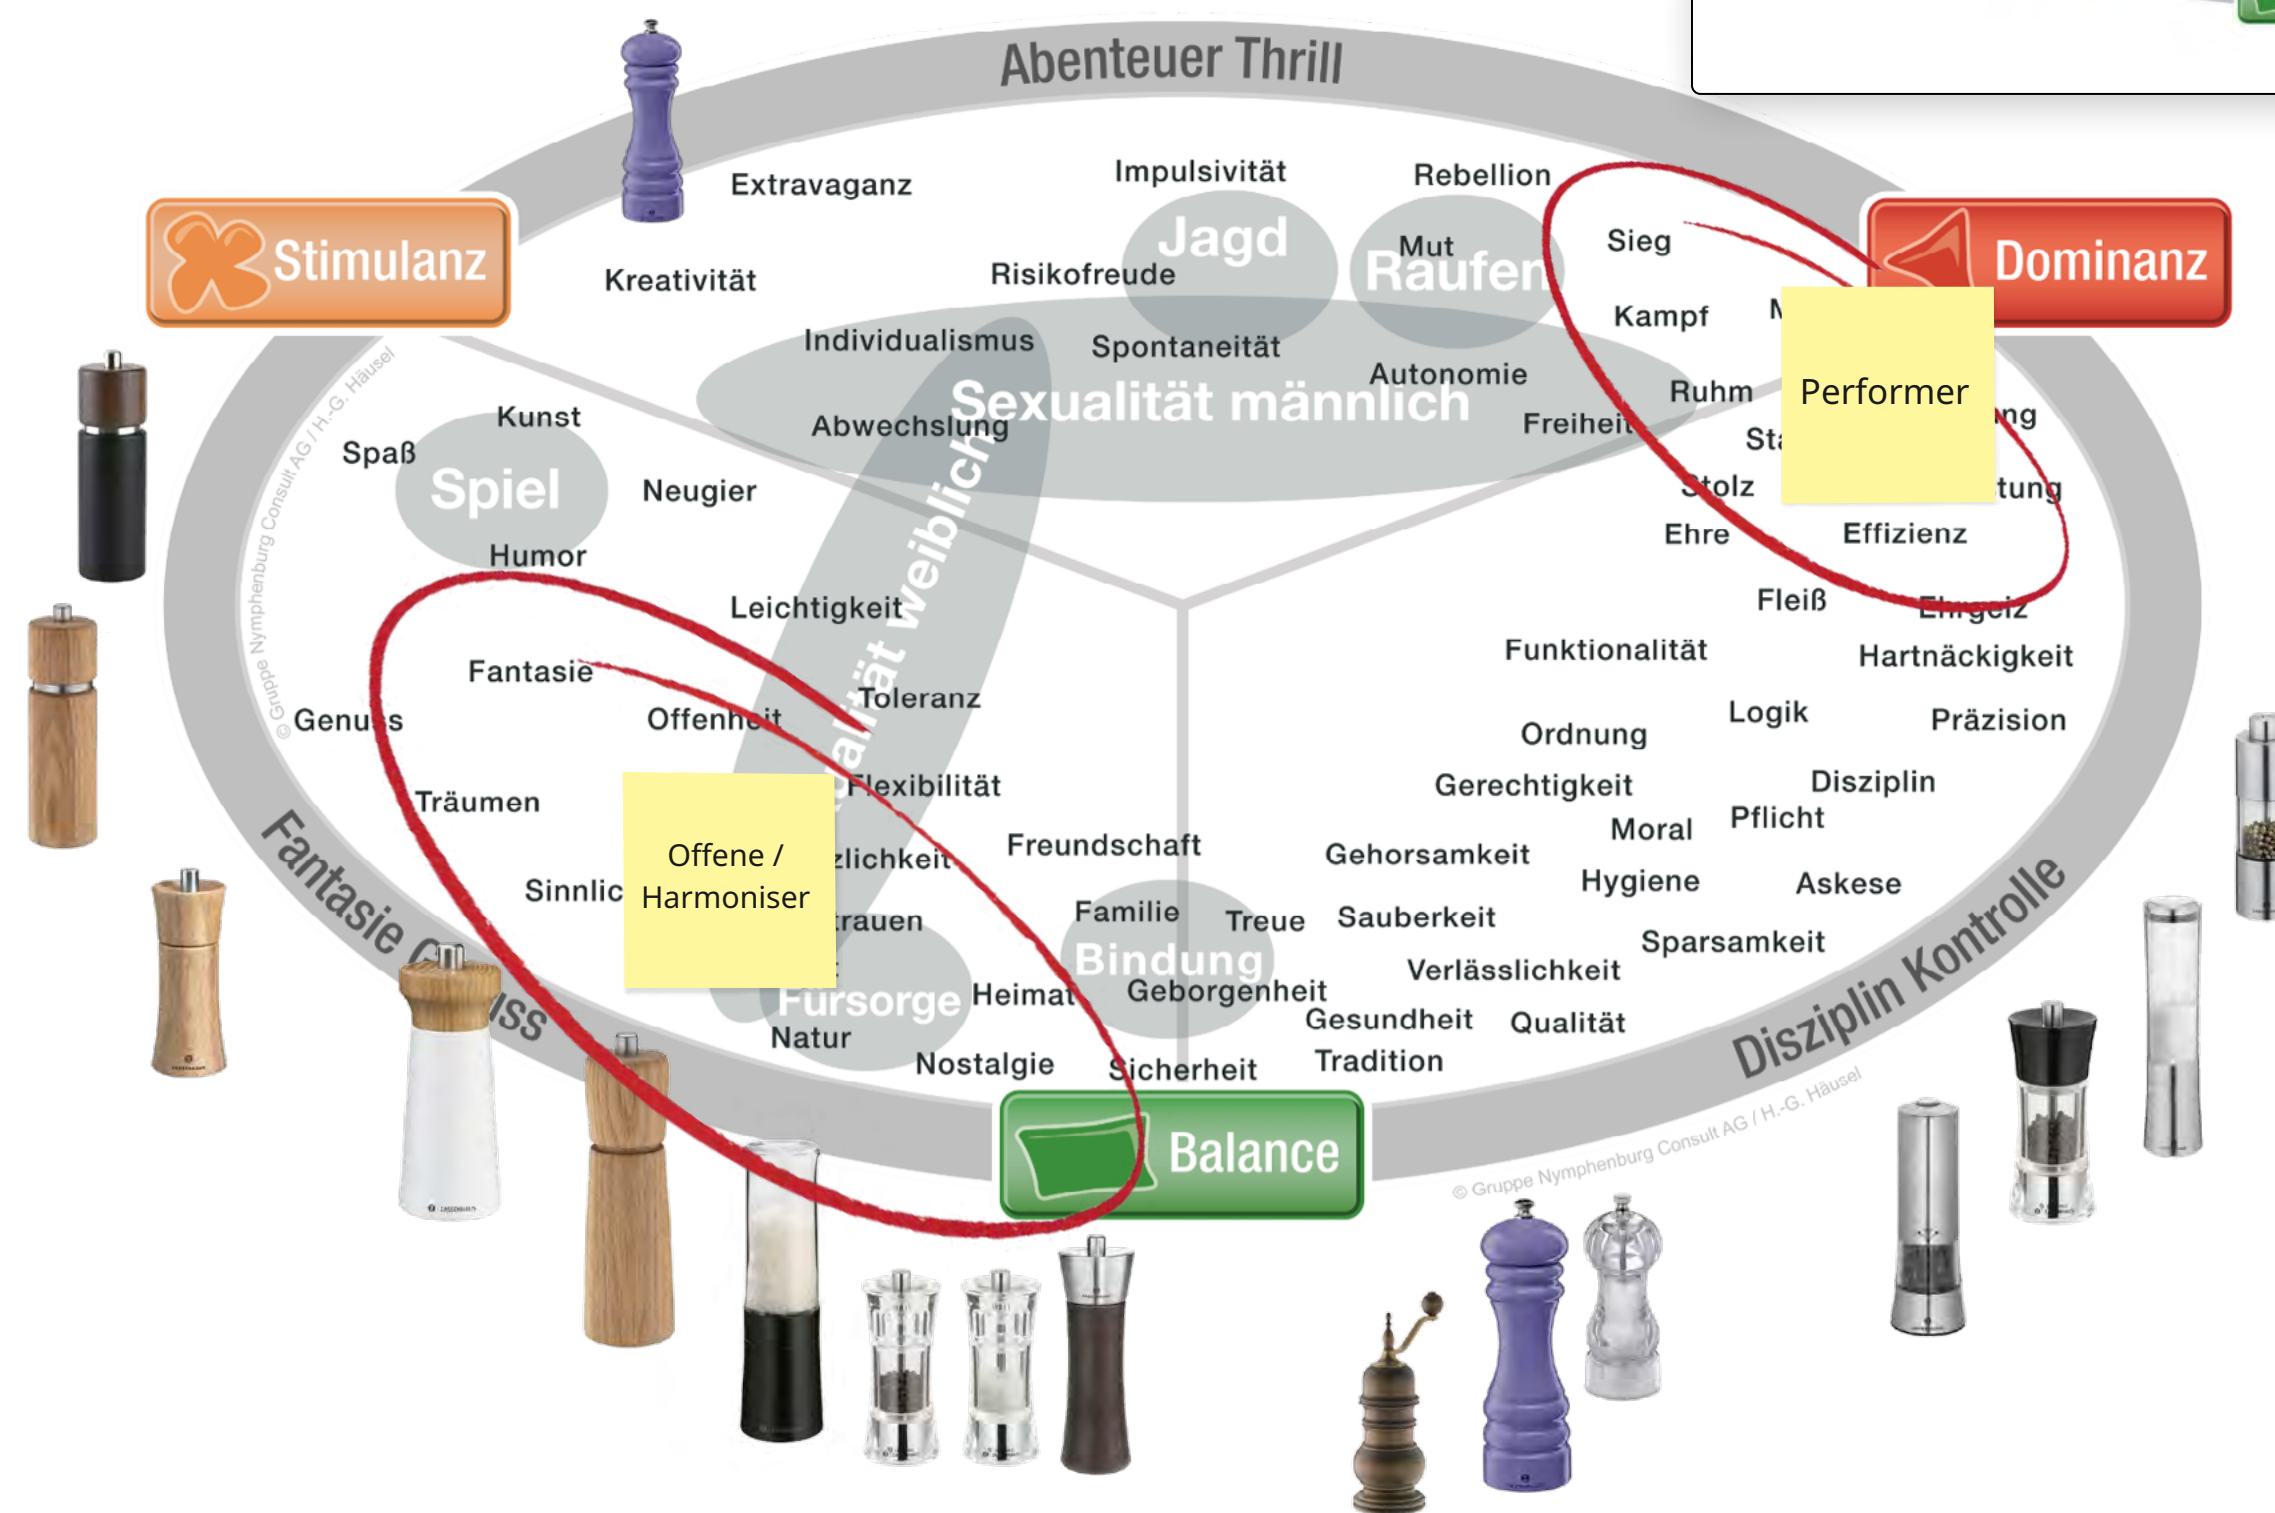

Research & Analysis

TARGET GROUP

After analyzing Zassenhaus's existing product range and conducting a Limbic analysis of a potential, design-conscious target group with a passion for cooking, we selected the „Open & Harmonizer“ segments.

DESIGN INTENTION:

- Natural materials
- Harmonious design that integrates into the living space
- Table-ready aesthetics
- Color differentiation for two types (salt & pepper)
- Soft and organic forms
- Friendly appearance

Kevin Klöcker

Research

ENVIRONMENT & COMPETITOS

By contextualizing the living environments of the selected target groups and analyzing the competition, the target audience and their design requirements were further refined to define their specific values and expectations.

Offene

Wertewelt der Harmoniser

- Genuss, Offenheit & Fantasie
- Wohlfühlen, Lockerheit & Leichtigkeit
- Kultur, Trends & Aufgeschlossenheit
- Erlebnis, Lebensfreude & Optimismus
- Empathie, Toleranz & Nachhaltigkeit
- Gesundheit, Wellness
- Spontan, Kontaktfreudig & offen für Inspiration
- Wertigkeit & Modernität
- Kreativität

Kauf- und Konsumverhalten

- Anspruchsvoll, Genuss- und Erlebnisorientiert
- Gesundheit, Wellness, Einrichtung
- Qualität, natürliche Rohstoffe & Nachhaltigkeit
- Trends und Mode
- Konsumfreudige Spontankäufer
- Achten aufs Geld, aber nicht vorrangig - Design, Qualität und Marke sind wichtiger
- Gönnen sich gern mal was
- Bummeln & Onlineshopping gleichermaßen
- Offen für Inspiration und Neues - probieren gerne aus
- Testberichte & Produktinformationen relevant

Relevante Fragen im Entscheidungsprozess:

- Gehe ich damit mit dem Trend?
- Kann ich es genießen / bringt es mir Genuss und Freude?
- Fühle ich mich damit Wohl?
- Ist es stressfrei?

Ideation

SKETCHING PHASE

Validation of various basic shapes, all characterized by an organic and soft aesthetic. Initial selected concepts were reviewed using rapid CAD mock-ups.

- Combination of various geometric primitives
- Soft transitions and fluid surface continuities
- Linear, yet non-angular design
- Additional or offset elements intended for customization

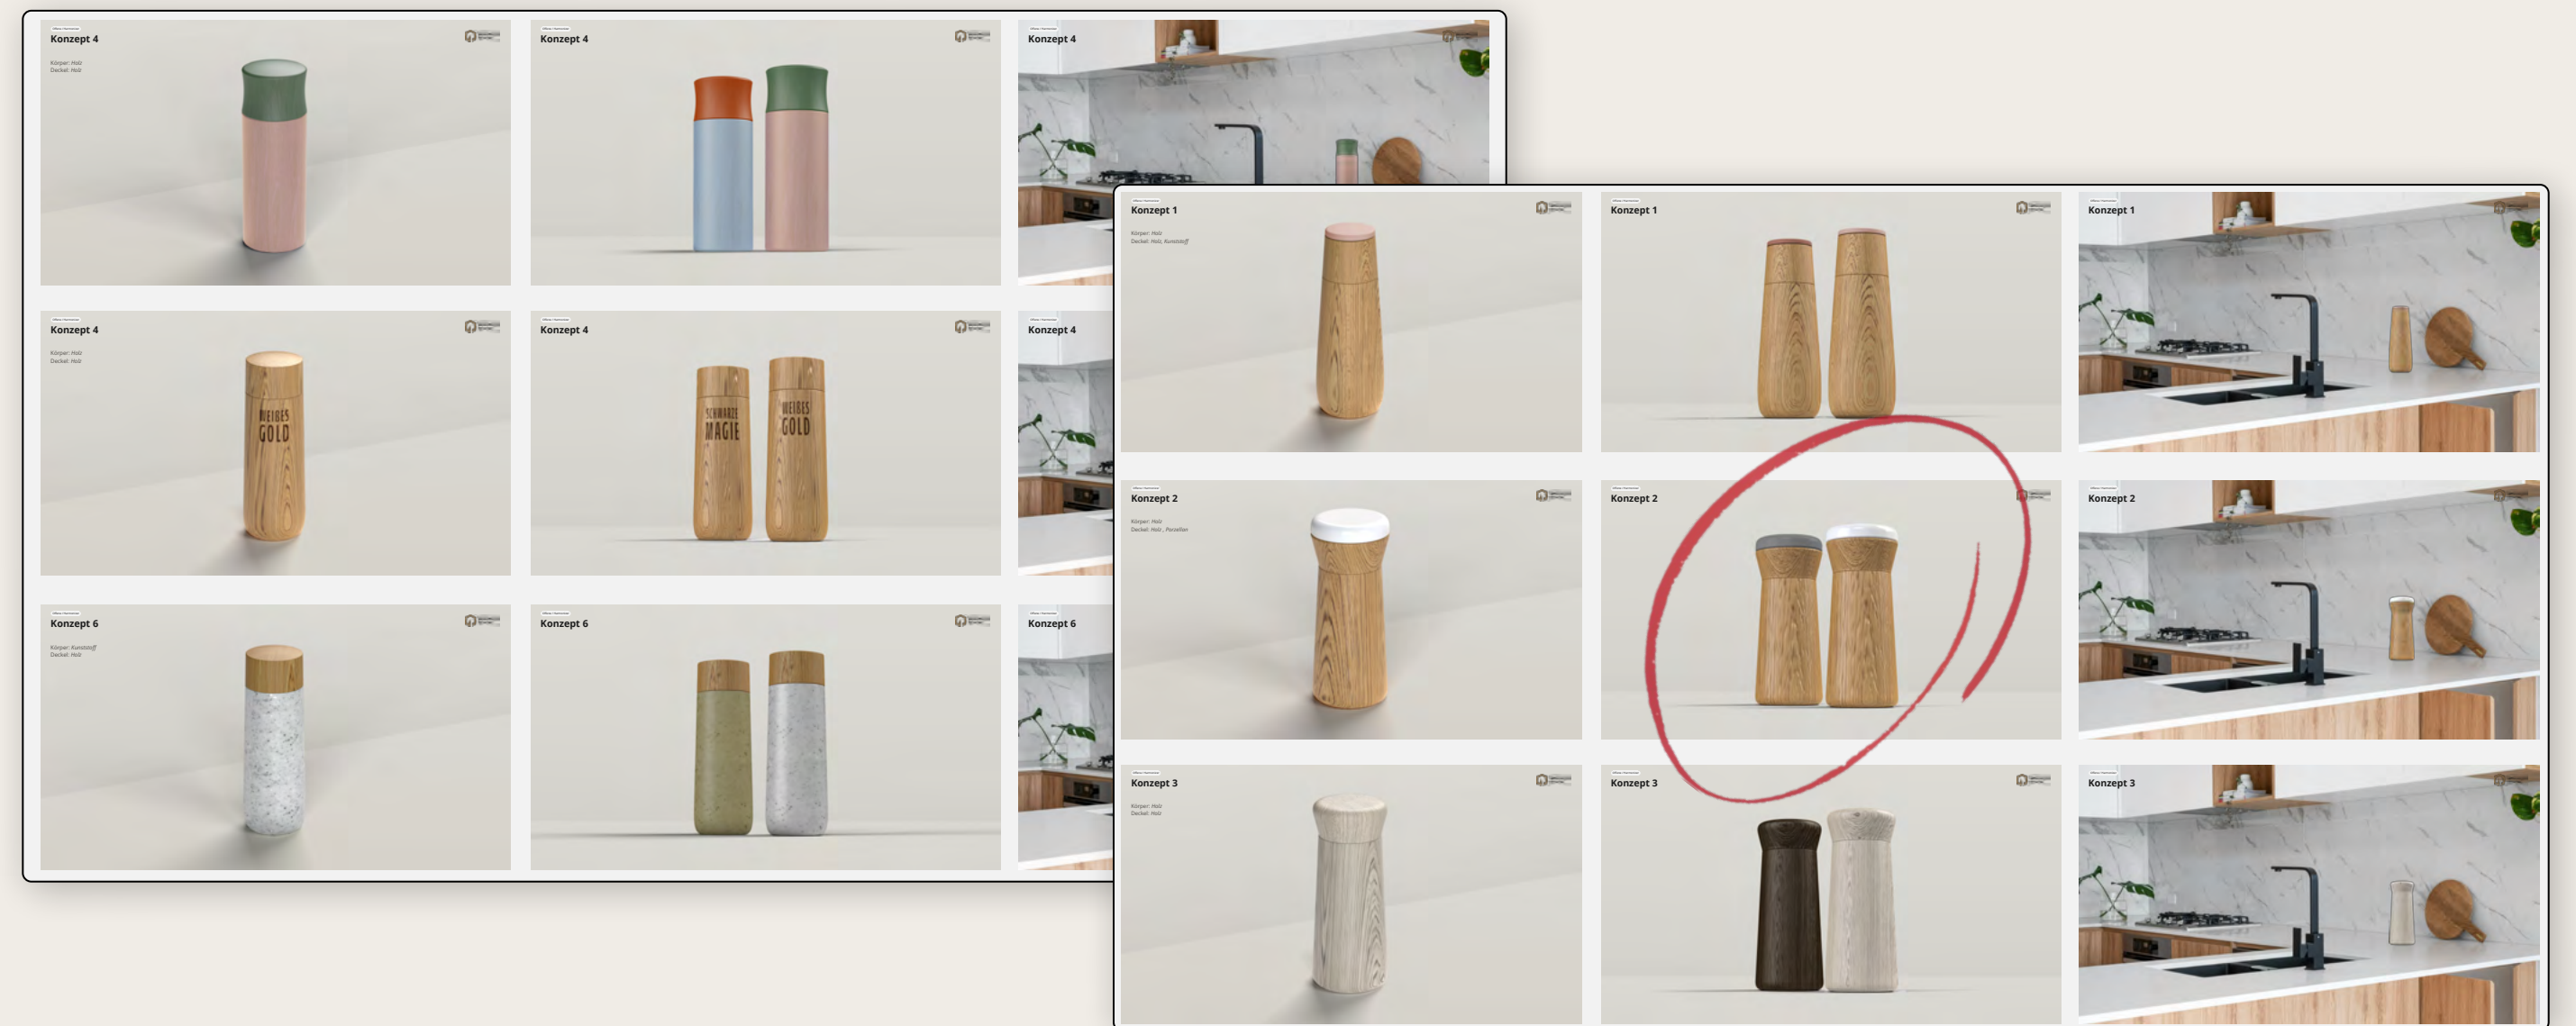

Ideation

DESIGN REFINEMENT

Following selection, the designs were transferred into CAD and adjusted in terms of proportion and form. Together with Zassenhaus, a design was chosen for further development.

- CAD refinement of selected forms
- Adjustment of surface transitions and continuities
- Design visualizations for initial design review
- Initial material and color concepts applied to various designs
- Selection of a design for further development

Refinement

DESIGN FINALIZATION

The selected design was further developed and optimized for manufacturing and ergonomics, including color concepts and material selection based on various samples.

FINAL REFINEMENTS

- Adjustment of width and height for improved ergonomic handling was verified using 3D-printed prototypes
- Surface transitions were adapted and optimized for lathe production
- Material selection finalized based on physical samples
- Color families and pairings defined for future marketing

Kevin Klöcker

FINAL PRODUCT

With its organic basic form and the interplay of natural oak and KRION, the „LÜNNE“ spice mill by Zassenhaus is a functional design object that integrates perfectly into the target group’s living environment.

- The KRION lid can be unscrewed for filling, allowing the mill to be separated into three parts
- The natural oak remains untreated, offering an elegant haptic contrast to the cool, stone-like KRION lid
- The silhouette of the mill suggests the grip position and provides an ergonomic fit in the hand

Bring coherence to complexity by Design

Definition and development of a design language for a product family that is transferable to various products while offering scope for individual customization.

Duration: Various
Client: KOSTAL Industrie Elektrik GmbH & Co. KG
Role: Product Owner, Lead Designer
Responsibilities: Full scope Design Process

GOALS

Development and refinement of the Kostal design language for the future • A design mission statement that allows for individual customization • Translating technically complex products into an appealing and robust form.

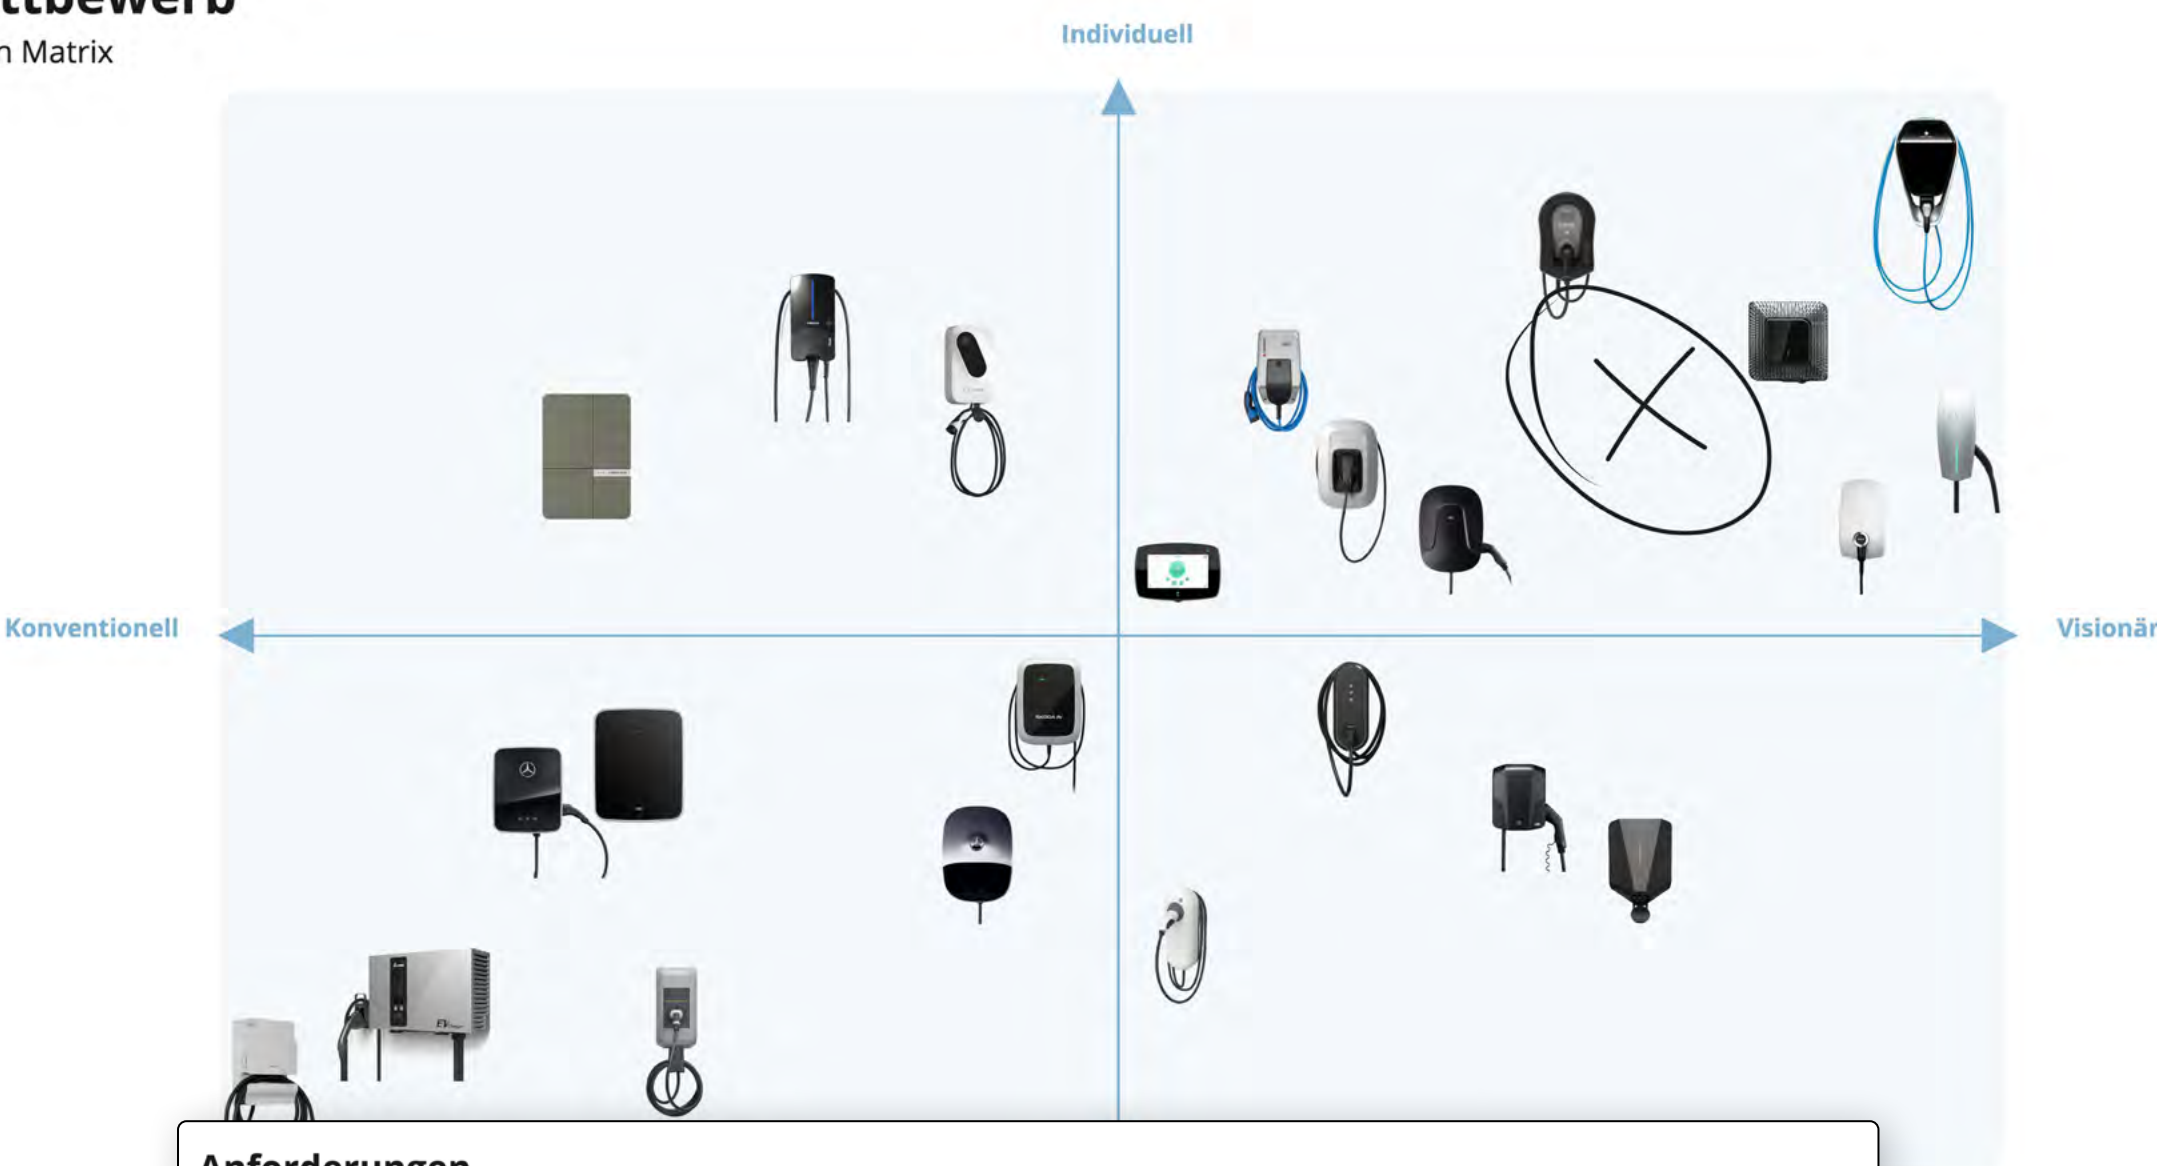

CHALLENGE

The initial design of the KOSTAL Plenticore solar inverter, which we created years earlier, marked a new beginning and the launch of the KOSTAL design and its associated design features. The challenge was to further develop these characteristics for the design of a wallbox without alienating the established design language.

Wettbewerb

Design Matrix

Anforderungen

- Rückseite möglichst universell
 - Trennung möglichst planar (einfacher im Werkzeugbau)
- Vorderseite Variabel
 - KOSTAL Design Variante
 - OEM Produkt
- LED Position Fix
 - Folie Bedruckt (Siebdruck ähnlich BÜLA)
 - LED Kanal im Spritzgusswerkzeug?
- RFID Reader auf der Vorderseite (Optional?)
- Kabel um den Grundkörper wickeln

Nutzer

- Möglichst klein und schmal (Enge Garagen)
- Einfache Handhabung (Ladekabel)
- Einfache Anzeige
 - Betriebsbereit
 - Warten
 - Laden
 - Service/Störfall

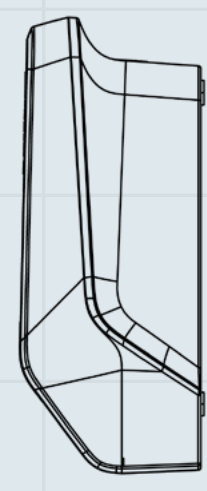

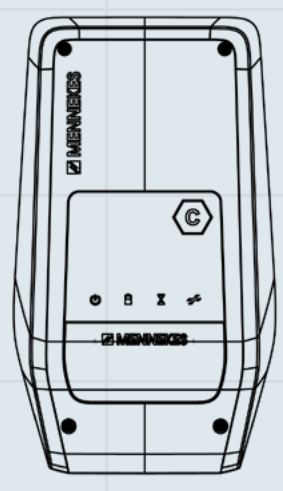

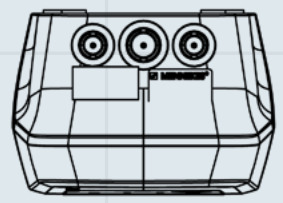

Installateur

- Kabel anschließen (Oben/Unten/Rückseite)
- Variable Kabelverschraubung
- 2-Fache Verschraubung
- Genug Platz um die Kabel zu verschrauben

Handel

- Attraktives Design (kein Einheitsbrei)
- USP

Research & Analysis

COMPETITORS & TARGET POSITIONING

Based on stakeholder requirements and competitor analysis, a target positioning was developed: the design should avoid a generic appearance, ensuring high brand recognition and an alignment with the automotive sector to emphasize KOSTAL's design standards.

TECHNICAL FOUNDATION

- Mennekes and KOSTAL are collaborating on the technical platform
- The design foundation is based on the Mennekes Amtron
- The overall dimensions of the Amtron define the approximate footprint of the KOSTAL wallbox

Ideation

INITIAL CONCEPTS

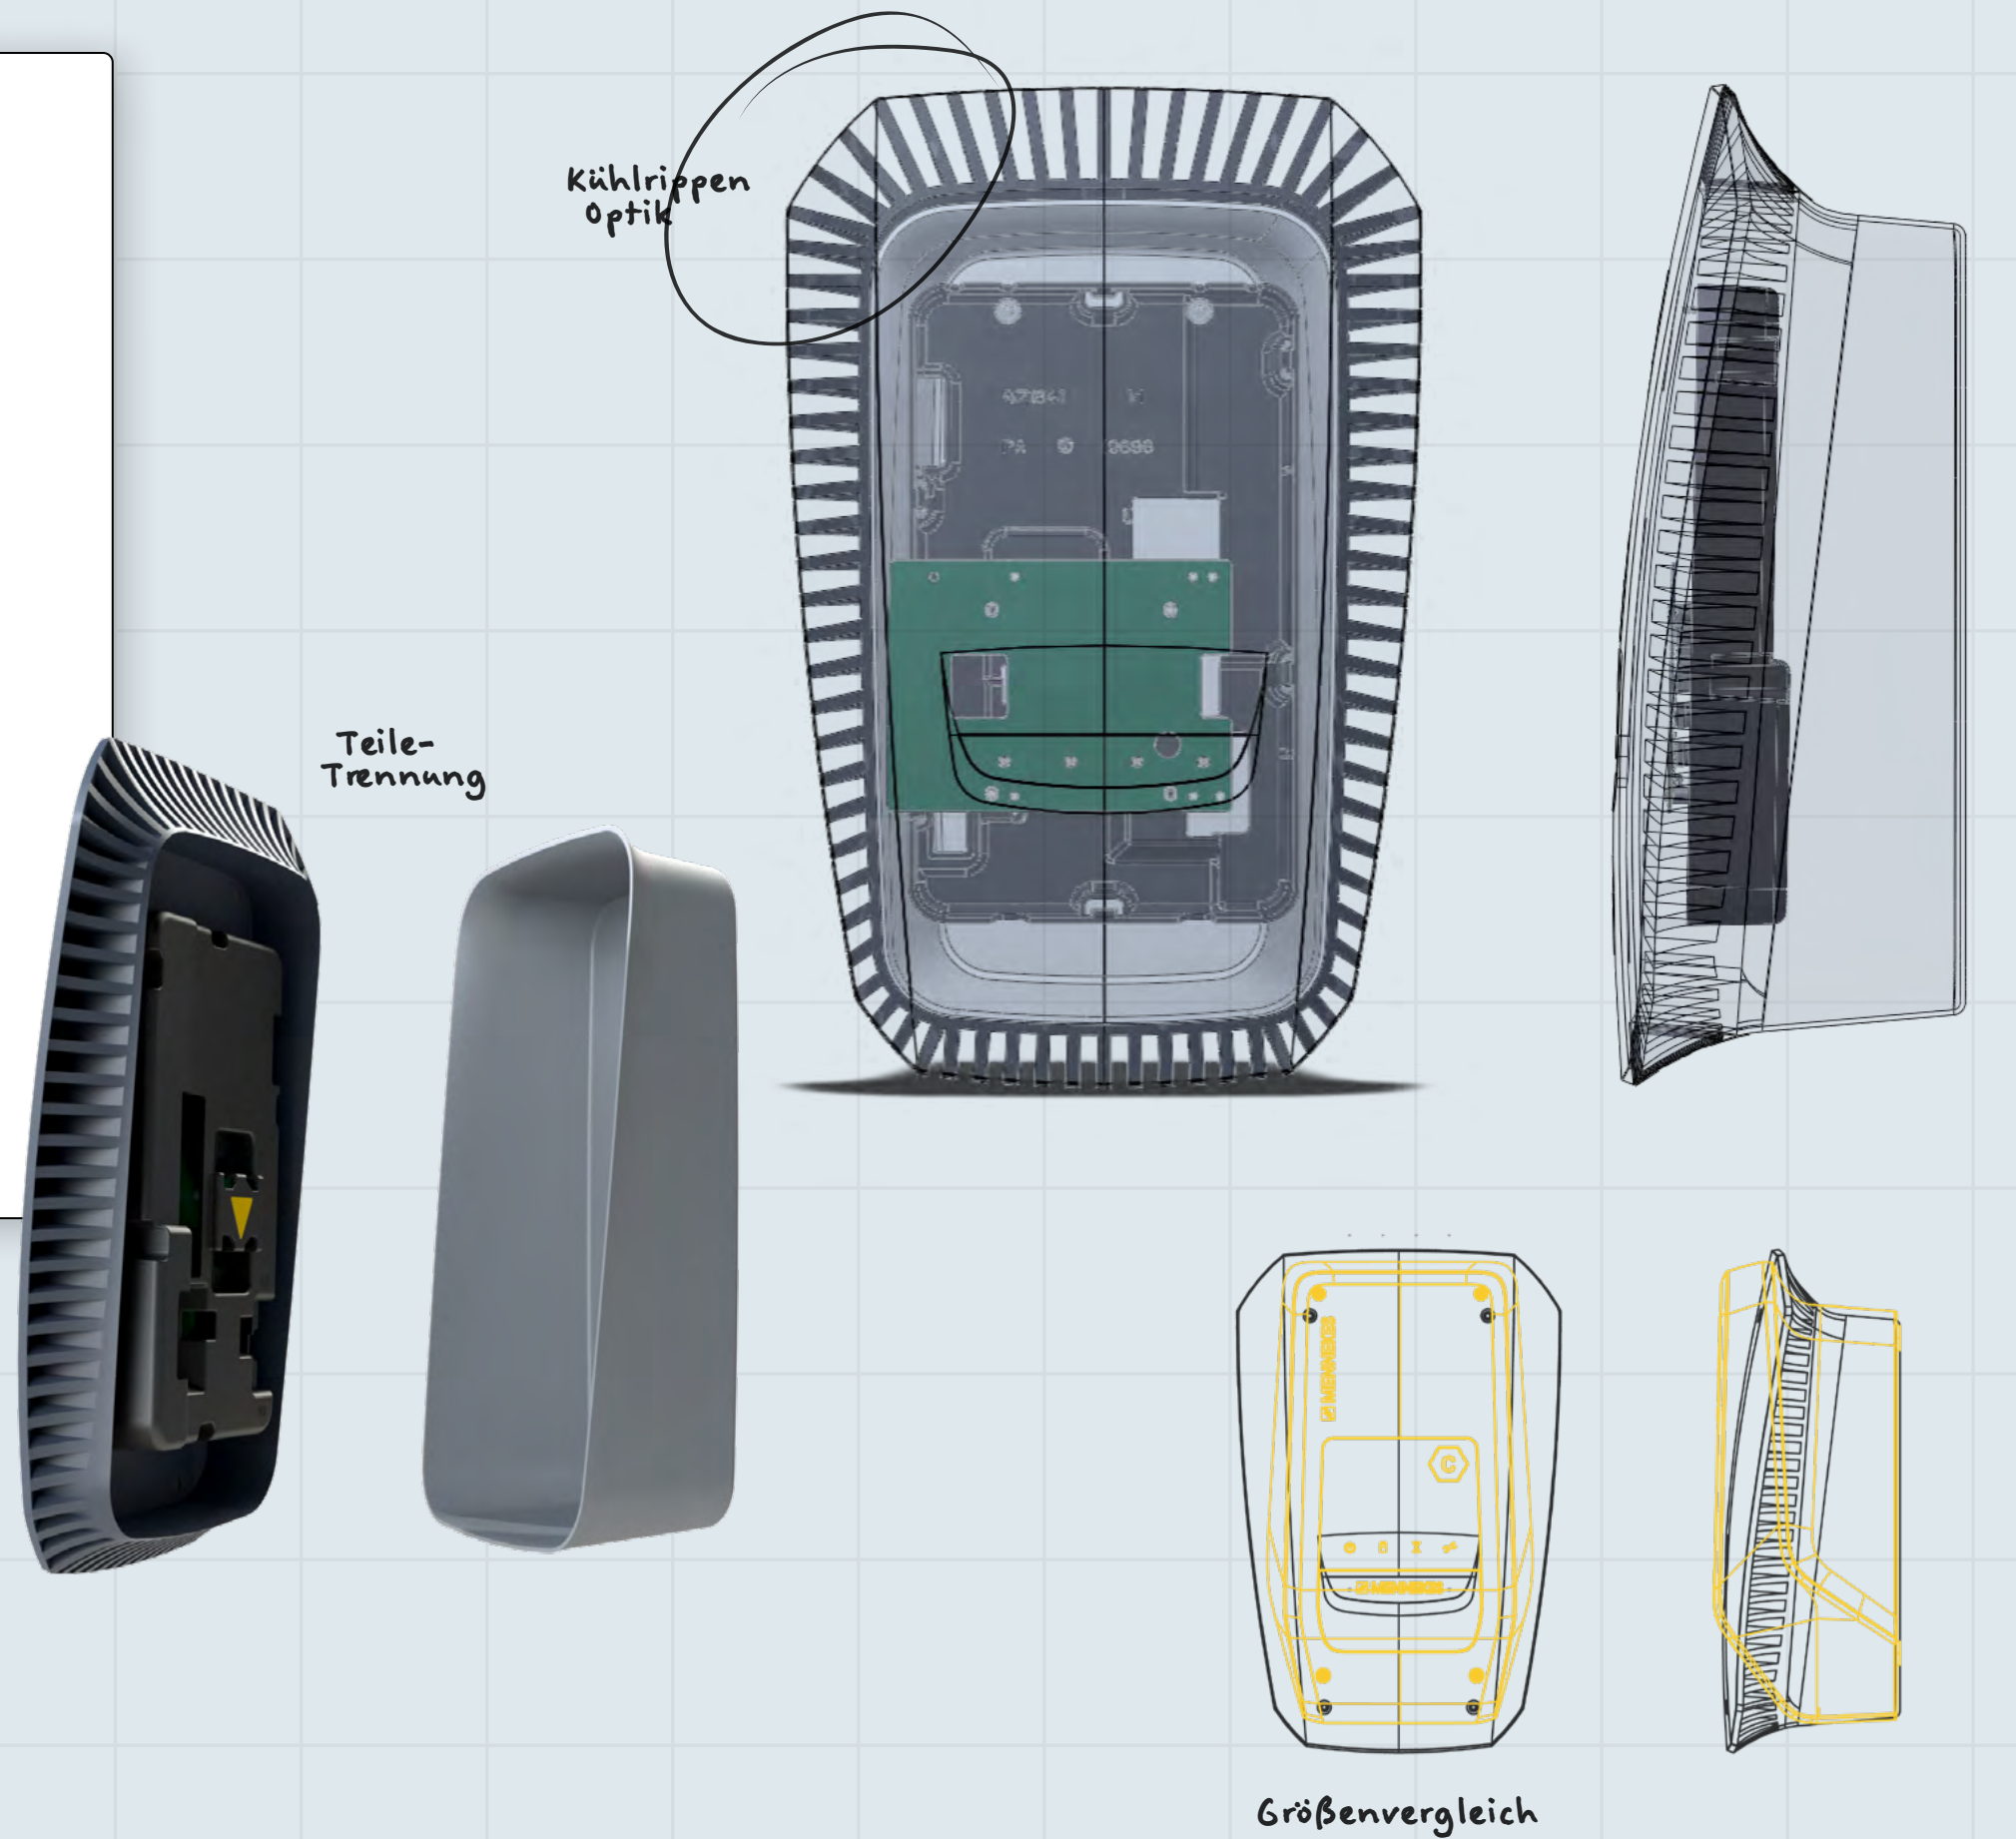

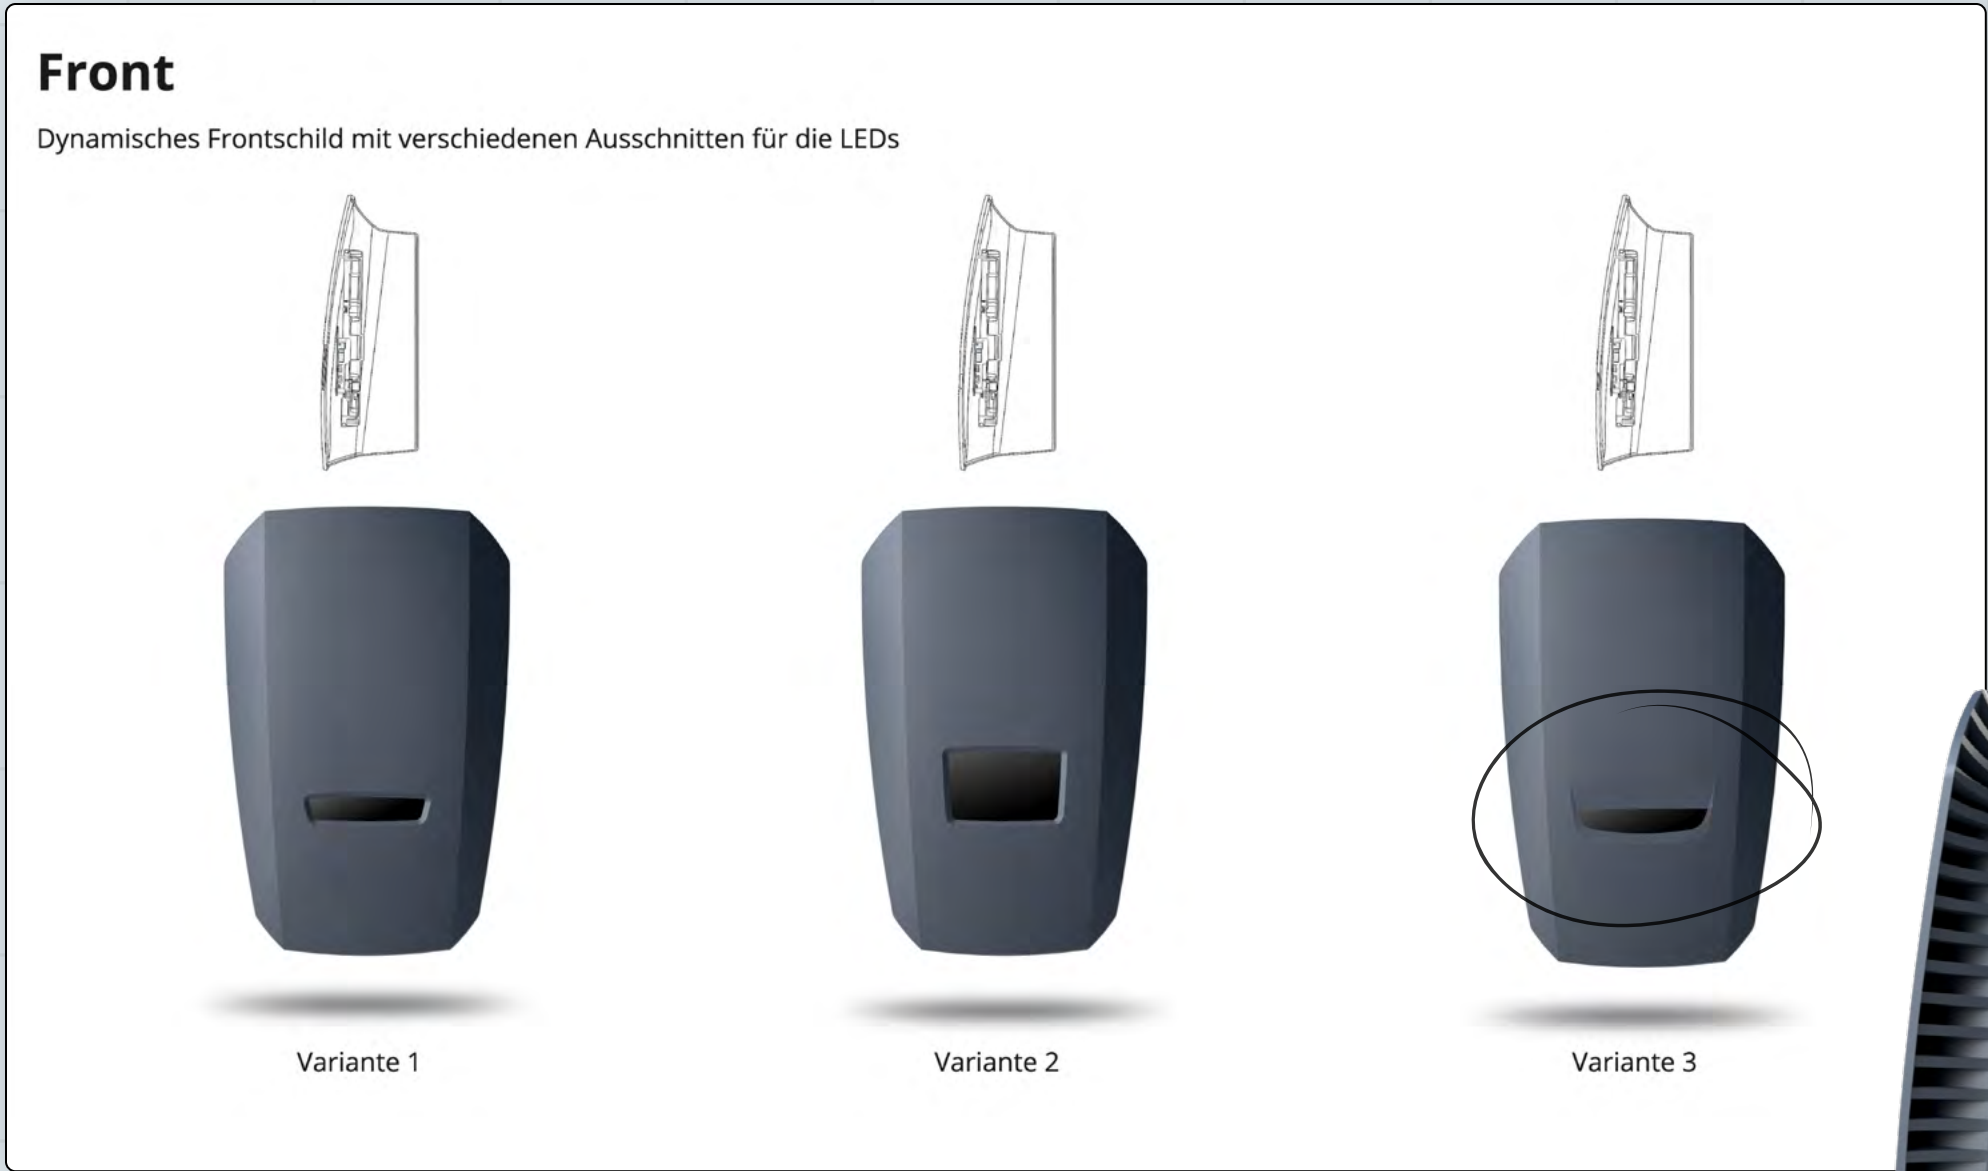

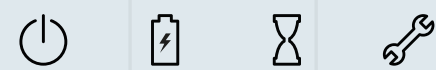

The design features of the PLENTICORE and the technical package of the Amtron served as the design basis.

- The tensioned basic form is a consistent element across all design drafts
- The display panel features a similarly dynamic contour
- A user-oriented front shield design
- The shield and rear housing provide an integrated suspension for the charging cable
- Optional removable side panels to conceal screw connections

Icon-Entwicklung

REFINEMENT

CONCEPT VALIDATION & REFINEMENT

The selected design was constructed in CAD, while several display concepts were under consideration. The decision was made in favor of Variant 3, as its upward-tapering surface contour, along with the lateral ribs, emphasizes the automotive character of the product.

KOSTAL

DESIGN DECISIONS

- Housing assembly consisting of upper and lower shells
- Dynamic contour consistently oriented toward the PLENTICORE design
- Dimensions of the shield design adapted to the AMTRON specifications
- Custom icons designed in the matching KOSTAL style
- Mounting holes for the front shield integrated and adapted to the design

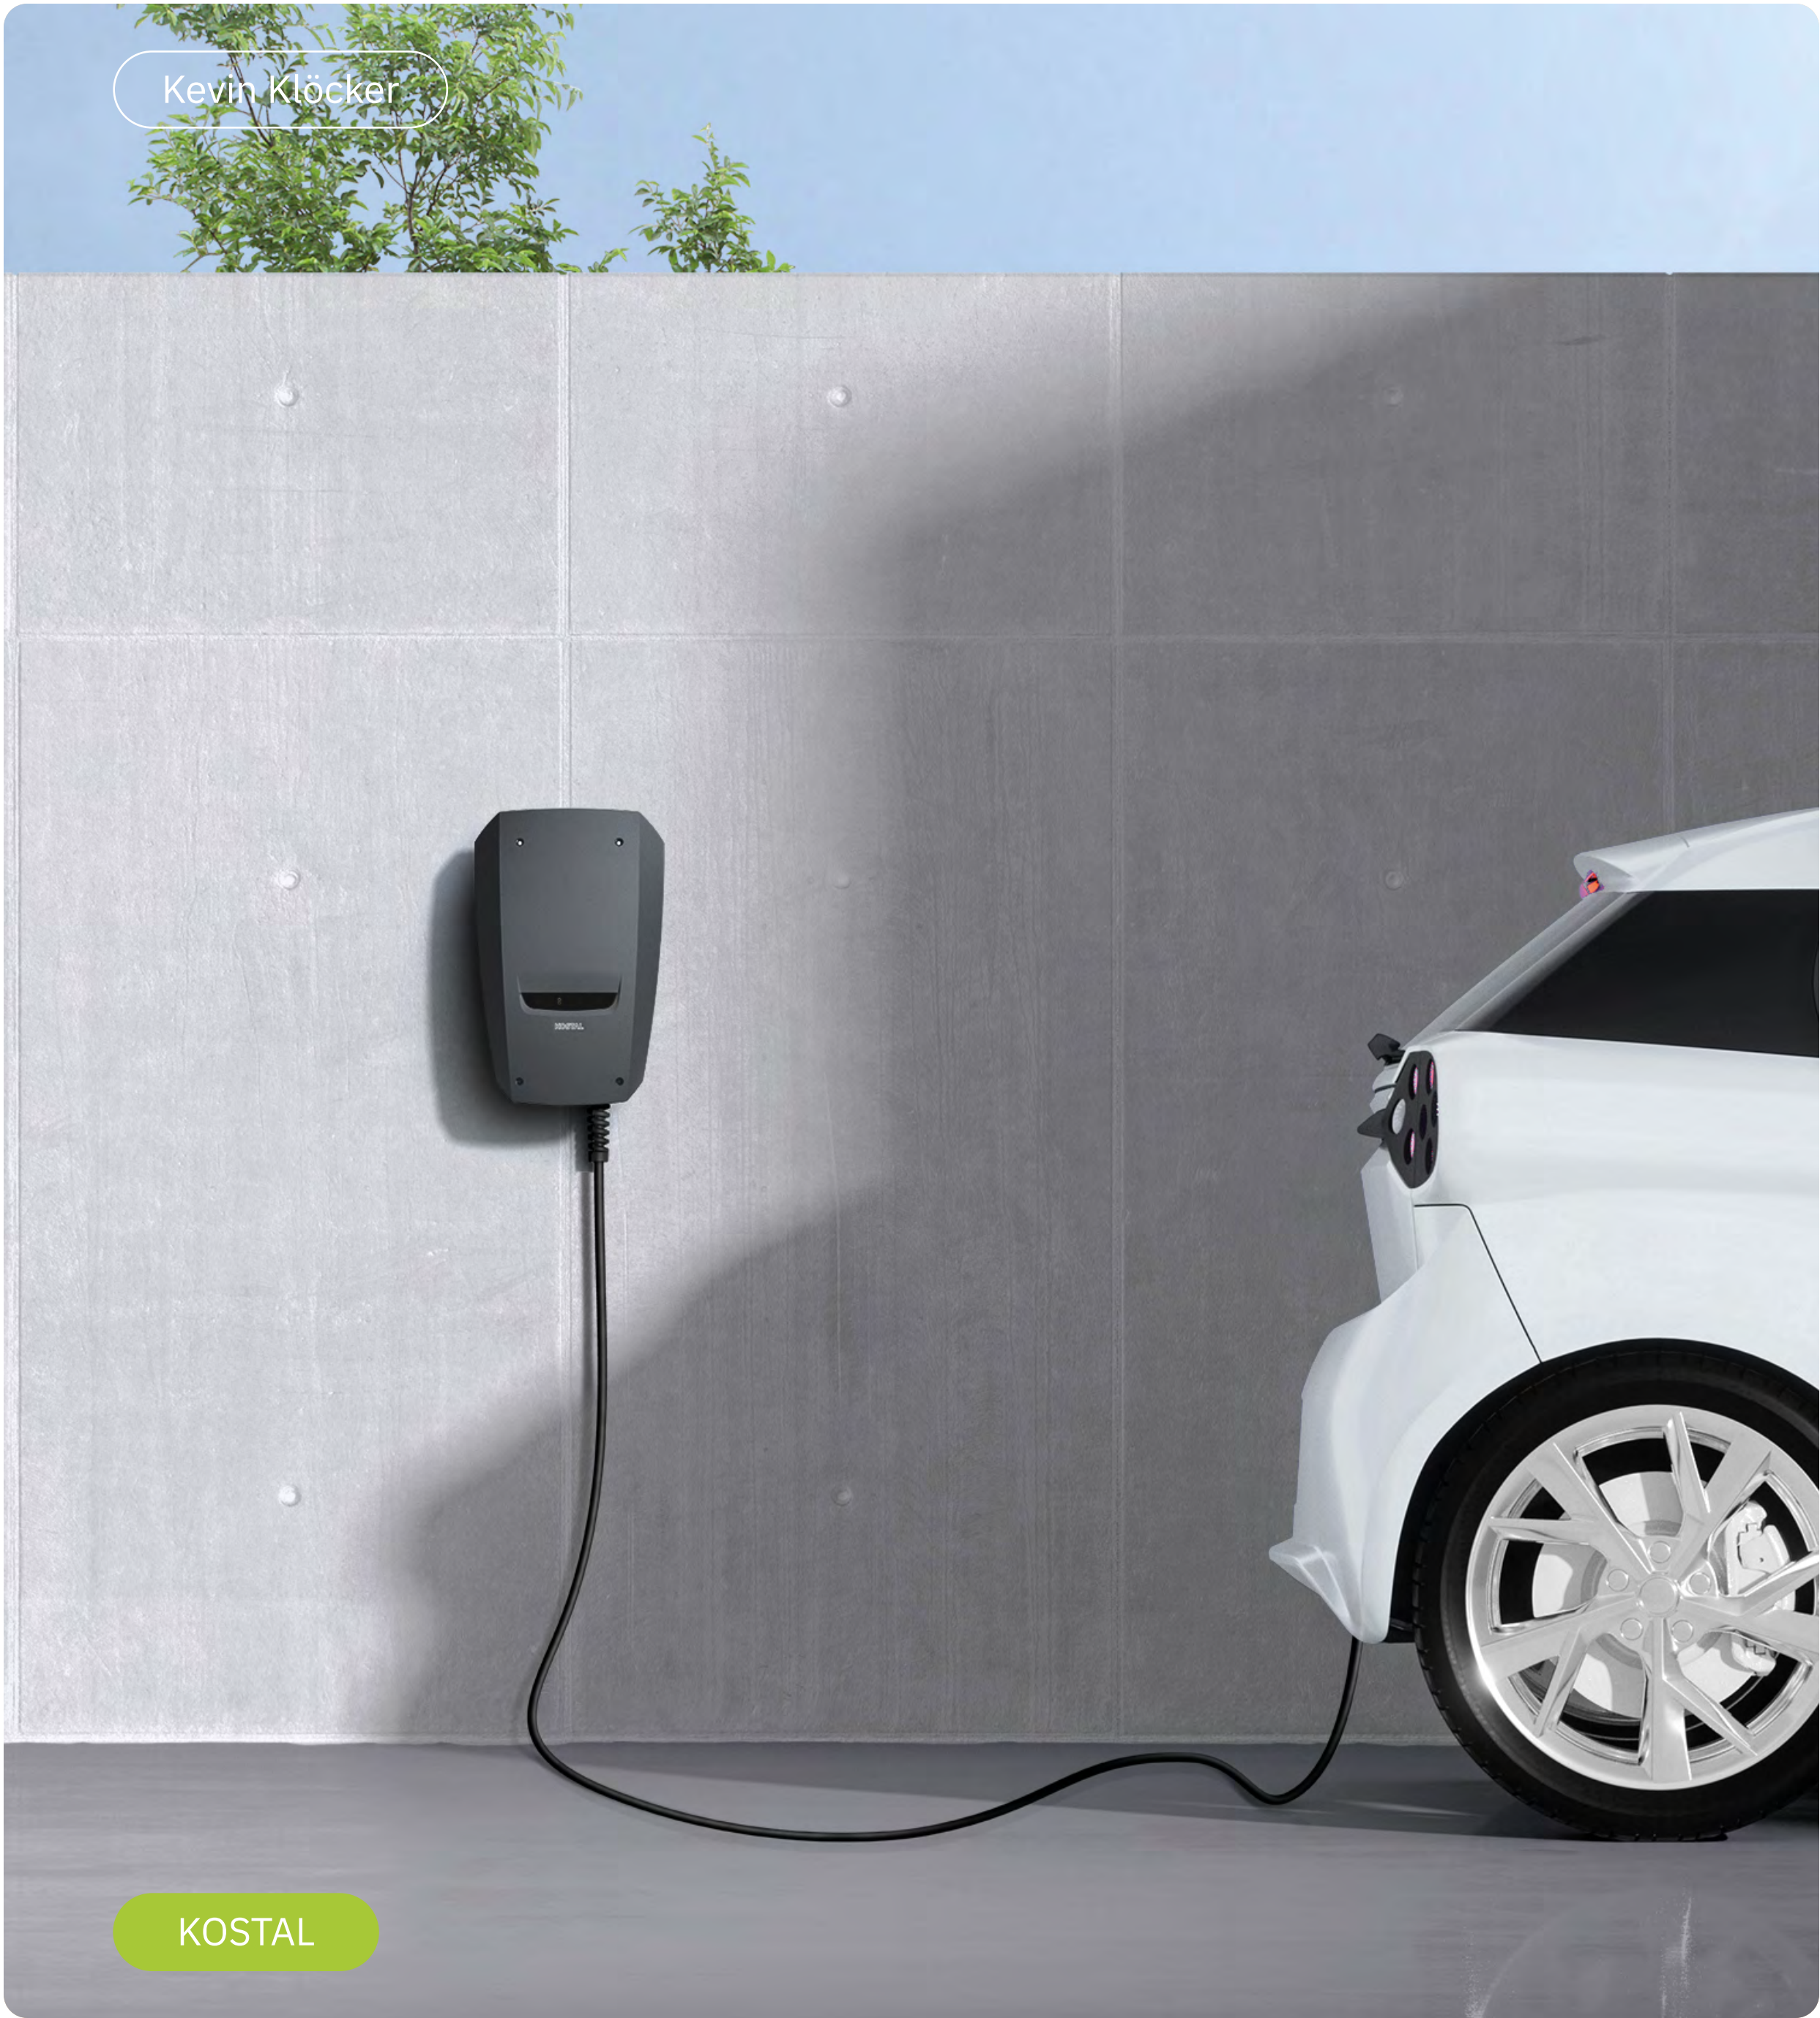

FINAL DESIGN

The final design represents a subtle evolution of the existing PLENTICORE design. The core design features were transferred to the wallbox while still allowing scope for individual adjustments within the display area.

DESIGN FEATURES

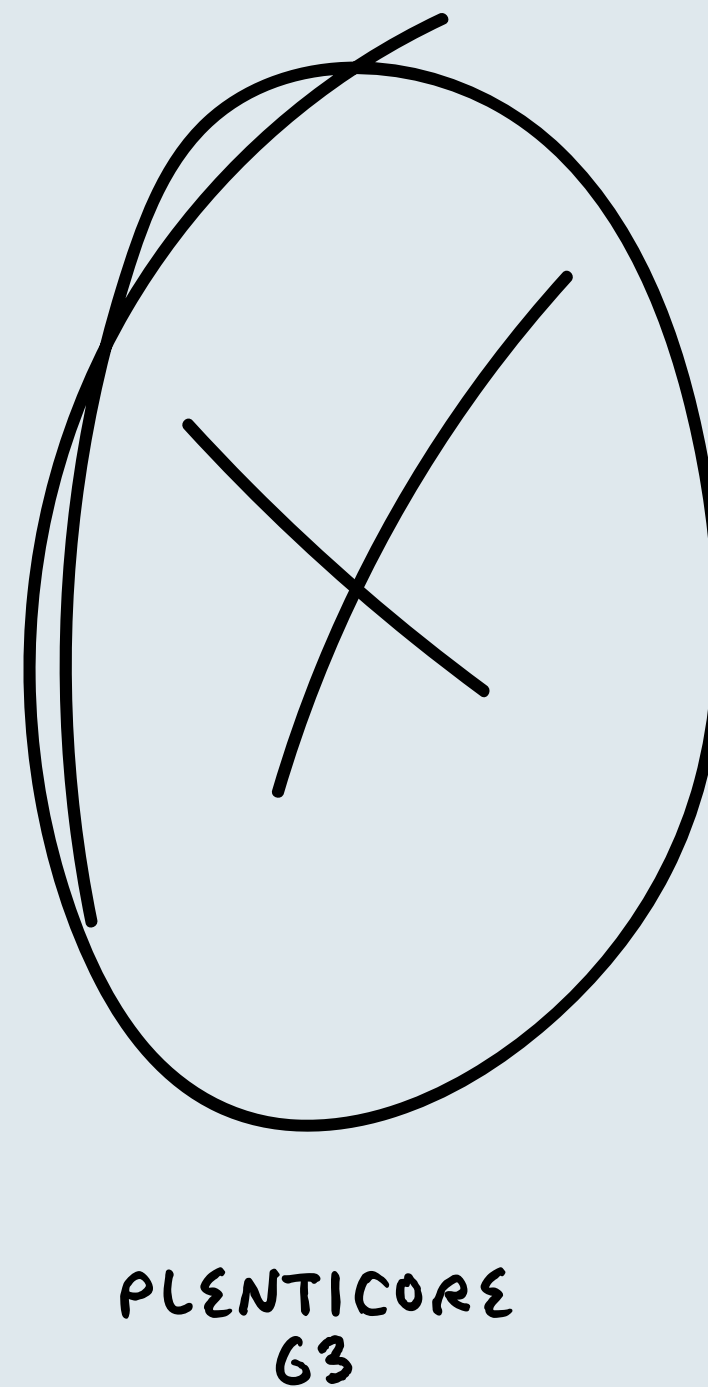

- Assembly consisting of upper and lower shells
- Upper shell features a shield design—aspiring, dynamic, and tensioned
- Ribbed aesthetics visible on the sides as a design element from the automotive world
- Display transitions tangentially into the shield surface at the top, creating a harmonious, soft contour
- Sloping side elements in a single color evoke the PLENTICORE design

Kevin Klöcker

KOSTAL

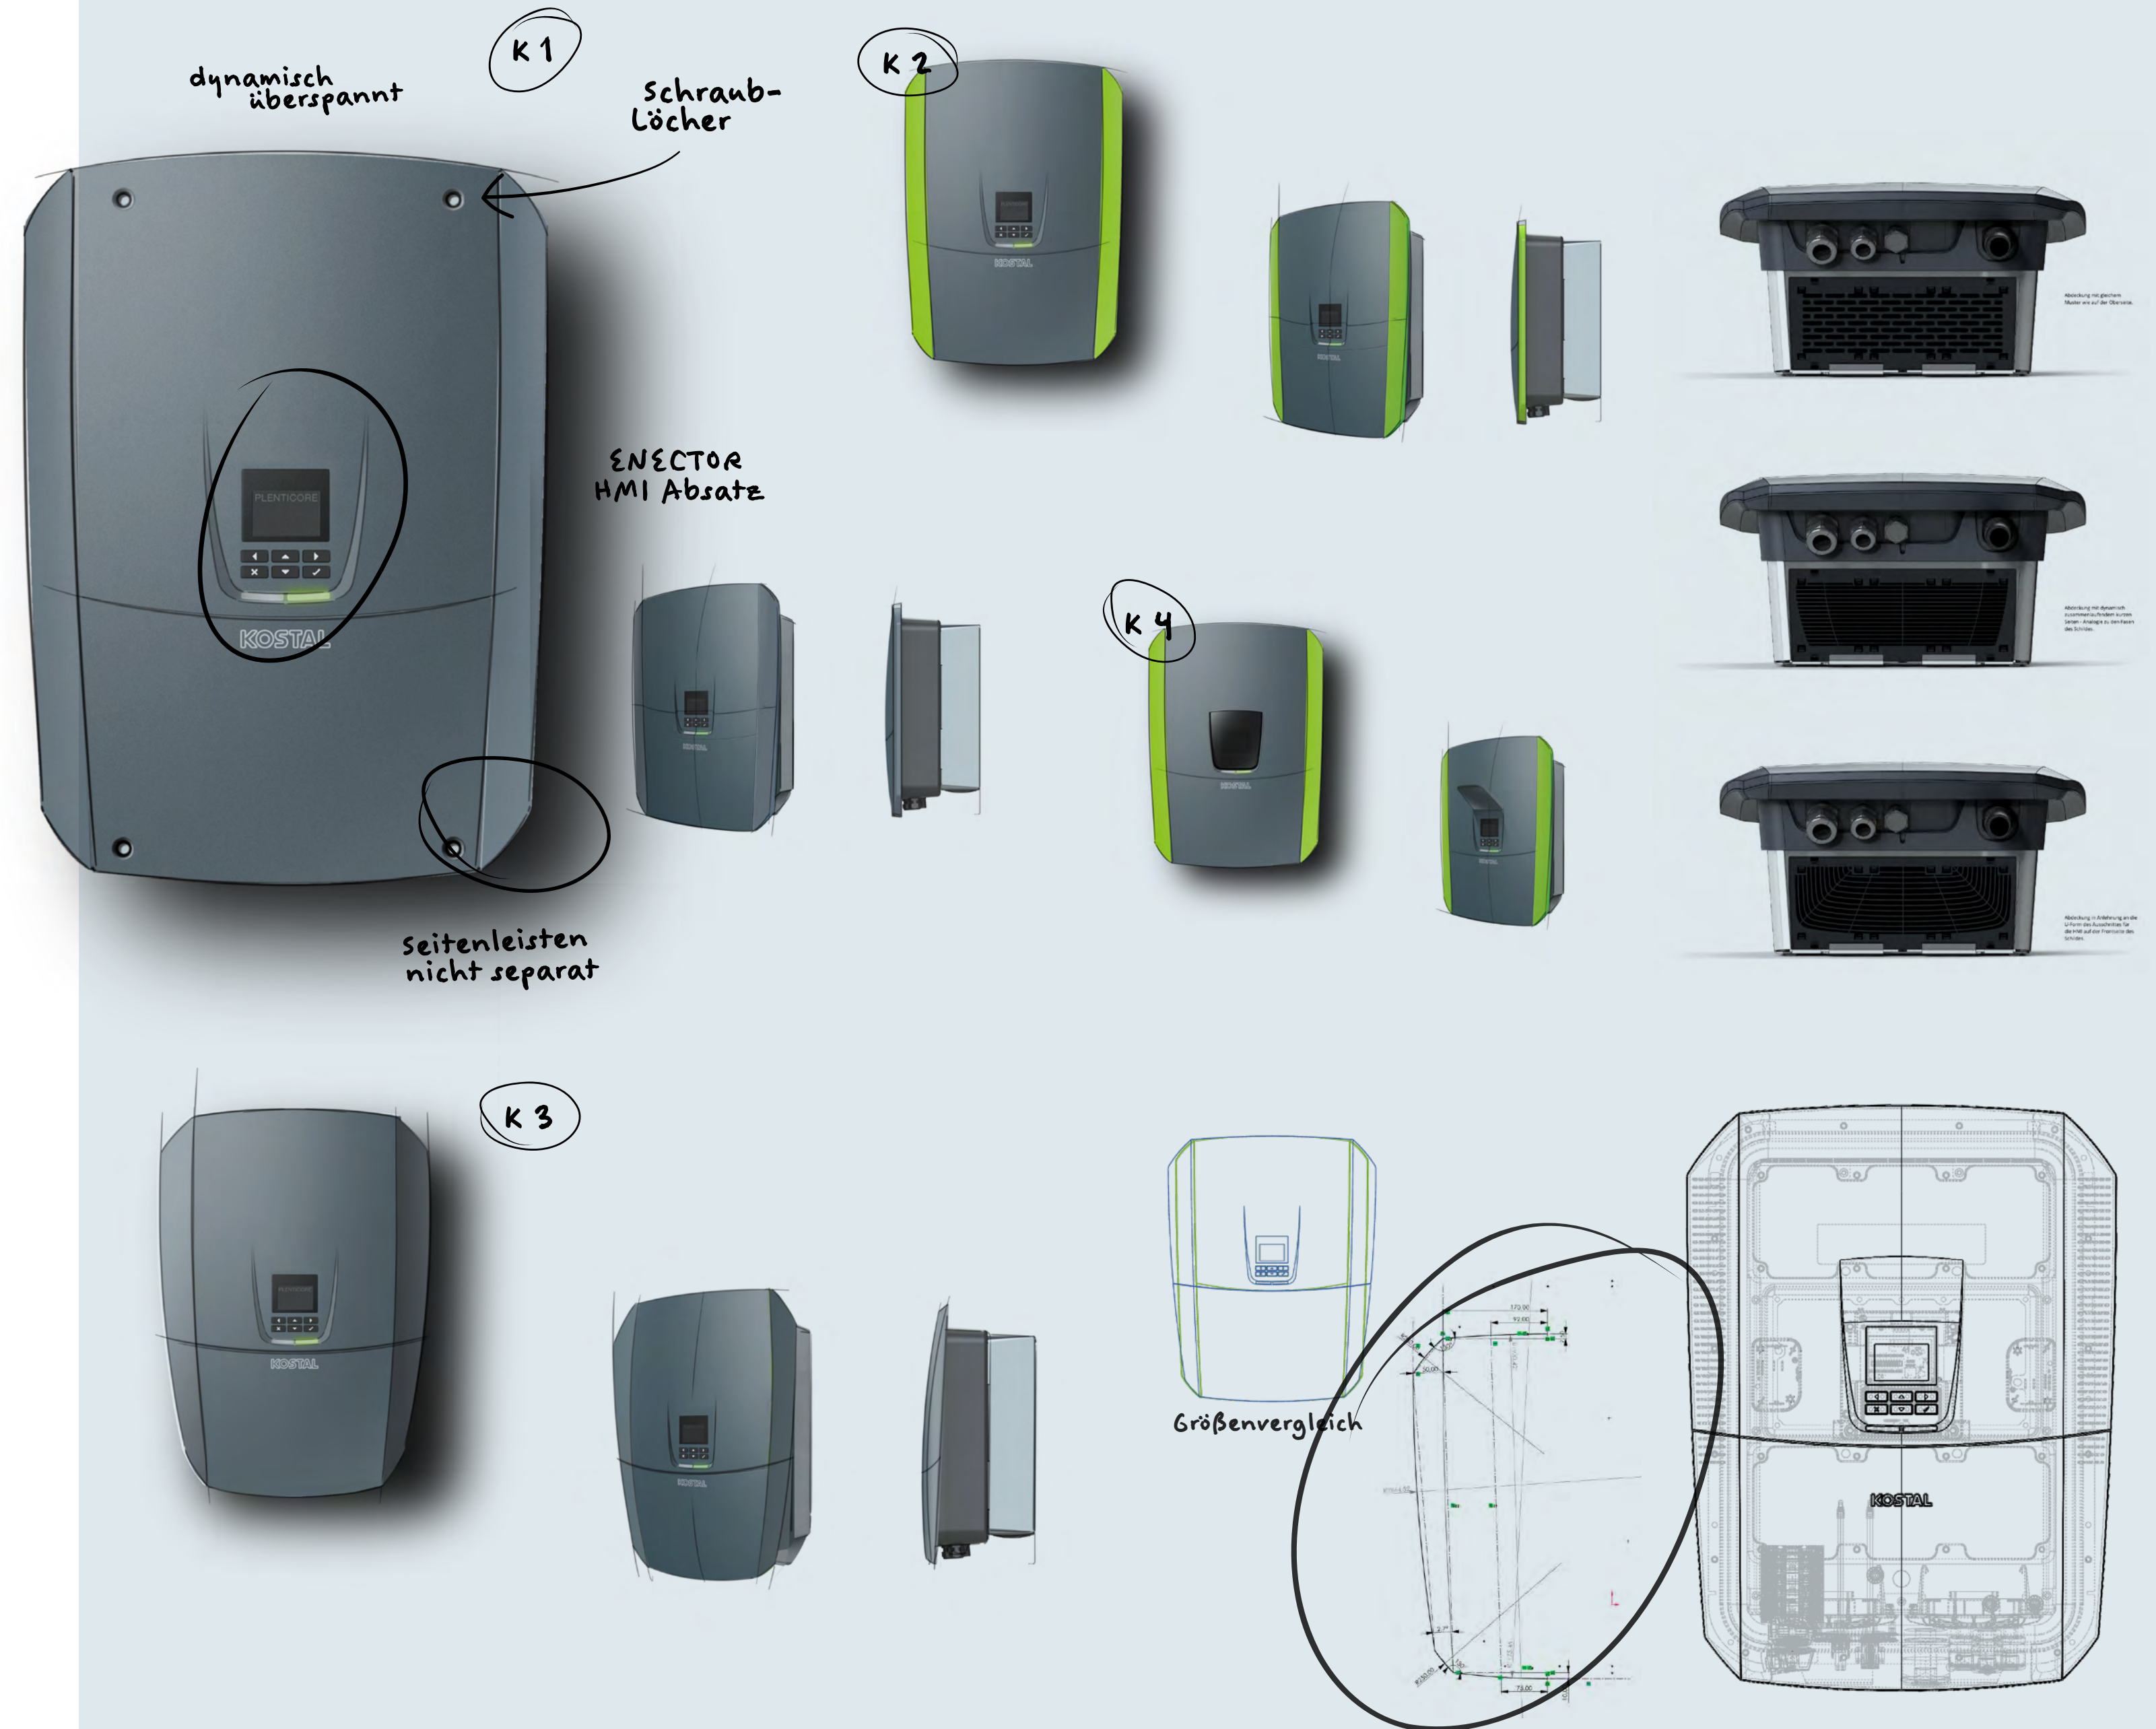

WHATS NEXT?

Following the successful market positioning of the ENECTOR wallbox, the redesign of the PLENTICORE followed. The design language was to be further evolved to distinguish the new generation from the old.

SMALL DESIGN REFINEMENTS

The wallbox and its new design elements served as the basis for the redesign and further development of the design.

- Elimination of the green side elements for easier feasibility and a uniform appearance
- Upward-opening display panel analogous to the wall-box
- 3D tensioned front shield with a dynamic contour
- Adapted corners and contour based on the wallbox

Kevin Klöcker

FINAL DESIGN

The new design represents a further evolution of the KOSTAL design language and a close alignment with the wallbox design. Details such as the sloping sides and the upward-opening display panel create an exciting interplay of light and shadow.

KOSTAL

Kevin Klöcker

KOSTAL

FAMILY DESIGN

Both products harmonize well and share a consistent design language. With this new design, KOSTAL achieves high brand recognition in the world of solar and industrial electronics.
